eBay Inc. - Climate Change 2019

C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

eBay Inc. (NASDAQ: EBAY) is a global commerce leader including the eBay, StubHub and eBay Classifieds platforms. Collectively, we connect millions of buyers and sellers around the world, empowering people and creating opportunity through Connected Commerce. Founded in 1995 in San Jose, Calif., eBay is one of the world's largest and most vibrant marketplaces for discovering great value and unique selection. eBay was founded on the simple belief that people are basically good. Our technology has leveled the playing field by enabling people to connect and trade around the world, regardless of their circumstances or location. We believe that commerce should be not just transactional but rather transformational. Through our platforms, we are creating a better, more sustainable form of commerce that empowers people and creates opportunity. And we are committed to reducing the environmental impact of our platform by increasing efficiency, expanding our use of cleaner energy and using our global marketplace to extend the life of goods in a more circular economy. For more information about the company and its global portfolio of online brands, visit www.ebayinc.com. For more information on our environmental initiatives, please visit https://ebayinc.com/impact/.

C0.2

(C0.2) State the start and end date of the year for which you are reporting data.

<table>

USD

C0.5

(C0.5) Select the option that describes the reporting boundary for which climate-related impacts on your business are being reported. Note that this option should align with your consolidation approach to your Scope 1 and Scope 2 greenhouse gas inventory.

Operational control

C1. Governance

C1.1

(C1.1) Is there board-level oversight of climate-related issues within your organization?
Yes
C1.1a

(C1.1a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.

<table>
<thead>
<tr>
<th>Position of individual(s)</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Director on board</td>
<td>Two eBay Board of Director have responsibility for climate-related issues. We have chosen to engage around climate and other ESG issues at the board level because the board members have expressed interest in monitoring the company's CSR work. In addition, engaging at the board level ensures that issues will be prioritized by all company leadership. Both directors review climate-related progress and information as part of the annual Impact Progress Update and quarterly review of renewable energy targets. The Chair of the Board has a background in social responsibility work, as founder of the Bridgespan group, a company that provides management consulting to nonprofits. The eBay founder and Board Member heads the Omidyar Network, a philanthropic investment firm. Their personal passions and business acumen, make them the appropriate board members to provide oversight for eBay’s climate change management and other corporate social responsibility activities.</td>
</tr>
</tbody>
</table>

C1.1b

(C1.1b) Provide further details on the board’s oversight of climate-related issues.

<table>
<thead>
<tr>
<th>Frequency with which climate-related issues are a scheduled agenda item</th>
<th>Governance mechanisms into which climate-related issues are integrated</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheduled – some meetings</td>
<td>Monitoring and overseeing progress against goals and targets for addressing climate-related issues</td>
<td>Climate issues are on at least two board meeting agendas annually. This includes review and tracking of progress against our 100% renewable energy goal and review of climate highlights including our 2025 and 2030 absolute scope 1 and 2 emissions reduction goal from our annual Impact Progress Update. Questions or concerns from the board regarding progress toward these goals are then relayed to the Impact team to address as needed.</td>
</tr>
</tbody>
</table>

C1.2

(C1.2) Provide the highest management-level position(s) or committee(s) with responsibility for climate-related issues.

<table>
<thead>
<tr>
<th>Name of the position(s) and/or committee(s)</th>
<th>Responsibility</th>
<th>Frequency of reporting to the board on climate-related issues</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chief Sustainability Officer (CSO)</td>
<td>Both assessing and managing climate-related risks and opportunities</td>
<td>Annually</td>
</tr>
</tbody>
</table>

C1.2a
(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored (do not include the names of individuals).

Description of where in the organizational structure those positions/committees lie:

eBay has a Head of eBay Impact, who reports to the Chief Communications Officer, who reports to the CEO. The Head of eBay Impact is the position equivalent of a Chief Sustainability Officer for eBay. The company’s Renewable Energy commitment has been confirmed by the Executive Leadership Team, and the responsibility for the goal sits with the CFO. The company’s commitment to Renewable Energy is led by the CFO.

Rationale for why responsibility lies with these positions/committees:

The responsibility lies with the Head of eBay Impact because this position is the central position within the company that handles all corporate citizenship activities. While the execution of climate change management issues such as mitigation is spread throughout the company (for example, facilities, data center operations, and Finance), the Head of eBay Impact directs and facilitates the climate change mitigation and adaptation strategy from a centralized corporate position.

Company-specific description of responsibilities:

Responsibilities include (i) monitoring the company’s carbon footprint and determining the activities that have the most significant contribution to the footprint; (ii) developing strategies to reduce the company’s carbon footprint, including creating a comprehensive renewable energy strategy for eBay’s facilities in regions where our operational footprint is most significant, specifically our major data center locations (Utah, Arizona, Nevada); (iii) assessing climate change-related risks for the company, such as potential impacts to buildings, data center locations, and operational costs such as shipping of packages; (iv) developing and securing approval for climate change-related corporate goals, such as eBay’s commitment to achieve 100% renewable energy in our electricity supply at eBay data centers and offices by 2025 as well as decrease our carbon emissions by 50% in the same timeframe.

Description of position’s/committee’s specific climate-related issues monitoring process:

Monitoring climate-related issues is a multi-pronged process that involves internal and external consultation. Internally, the Head of eBay Impact works with the Sustainability Manager (also part of eBay Impact) colleagues from Operations, Communications and Finance to assess any risks and opportunities that climate change may present to the company. Externally the Head of eBay Impact works with industry organizations such as Ceres and the Renewable Energy Buyers Alliance to keep up to date on science, policy, technology, and other news and developments related to climate-related issues.

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

Yes

C1.3a
(C1.3a) Provide further details on the incentives provided for the management of climate-related issues (do not include the names of individuals).

Who is entitled to benefit from these incentives?
Energy manager

Types of incentives
Monetary reward

Activity incentivized
Emissions reduction target

Comment
As part of their annual review process, eBay’s Facilities and Energy managers are incentivized to identify and complete emissions and energy reduction projects that also result in operational cost savings for the company. These actions also support our target to achieve 100% renewable energy in our electricity supply at eBay data centers and offices by 2025 as well as decrease our carbon emissions by 50% in the same time frame.

Who is entitled to benefit from these incentives?
Chief Sustainability Officer (CSO)

Types of incentives
Monetary reward

Activity incentivized
Emissions reduction target

Comment
As part of the CSO’s annual review process, progress against all public and internal Impact team goals are assessed and achieving interim goals is incentivized through overall compensation. As the person who oversees both the renewable energy and carbon emissions reduction goals, the CSO is responsible for assuring the team’s progress on an annual basis.

C2. Risks and opportunities

<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Six-monthly or more frequently</td>
<td>&gt;6 years</td>
<td>Board or individual/sub-set of the Board or committee appointed by the Board eBay evaluates climate change risks and opportunities at the global level using a cross-functional governance model. This evaluation occurs annually, at a minimum, but with higher frequency in regions where our operational footprint is most significant, specifically our major data center locations (Utah, Arizona, Nevada). Our Impact team coordinates the evaluation of and response to risks and opportunities with leadership across a number of key functional areas including operations (workplace, data center), finance, government relations, legal and investor relations. Stakeholders from these teams develop specific responses to these risks &amp; opportunities for their functional area and provide inputs to and review/approve the annual assessment and disclosure of these risks &amp; opportunities.</td>
</tr>
</tbody>
</table>

(C2.2b) Provide further details on your organization’s process(es) for identifying and assessing climate-related risks.

- Description of a process for identifying and assessing climate-related risks

eBay has a specific climate risk management process coordinated through the Impact function. Subject matter experts from the Impact team actively engage with key global functions - finance, government relations, investor relations and operations teams – to evaluate climate risks and opportunities (R/O), interpret them into a business R/O framework and develop recommendations that can then be acted upon by decision makers. eBay evaluates climate change risks and opportunities at the global level using a cross-functional governance model. This evaluation occurs annually, at a minimum, but with higher frequency (at least every 6 months) in regions where our operational footprint is most significant, specifically our major data center locations (Utah, Arizona, Nevada). Government relations teams help assess transitional risks due to current/emerging regulation, and the potential costs to the company of complying with such regulations. The government relations team members employ consultants who review all pending regulations on the international, federal, state/local levels on a regular basis (weekly, monthly, quarterly depending on regulations) and flag any pertinent climate-related regulations. Operations teams work with internal and external experts to assess operational risks, such as the risks of extreme weather events to eBay’s facilities and data centers, and the costs of operational interruptions and facility repairs. Finance helps assess market risks, such as the decreased demands for products due to weather events, and the potential cost of such decreases in demand. Investor relations uses expert consultants to assess investor-related risks such as ESG screening and questions by investors. Because eBay does not own inventory or handle logistics such as product shipping, those risks are only lightly assessed, which is different from how another ecommerce company might approach these types of operational risks. The team also consults external subject matter experts to identify opportunities as well as social/policy/environmental issues that could materially impact our business. As R/Os are identified the appropriate teams evaluate and implement response measures. Short-term risks are prioritized, but long-term risks (6 years or longer) are considered as part of this process.

- Definition of ‘substantive financial impact’ when identifying or assessing climate-related risks

Substantive financial impact includes lower revenue growth or revenue decrease correspond to progressively higher risk. For example, the guidance issued by eBay at the end of 2018 for 2019 was 1% to 3% revenue growth but with increased margins and cashflow, so any impacts that would cause eBay’s growth to be on the lower end of the guidance, or especially below the lower end, would be considered significant.

(C2.2c)
Which of the following risk types are considered in your organization’s climate-related risk assessments?

<table>
<thead>
<tr>
<th>Risk Type</th>
<th>Relevance &amp; Inclusion</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current regulation</td>
<td>Relevant, always included</td>
<td>eBay’s Global Impact team consults with our Government Affairs colleagues to identify any current regulation risks, such as carbon pricing schemes. At the moment, the Government Affairs team is not aware of any substantive risk from current regulation. For example, the California Cap and Trade rule applies to large electric power plants, large industrial facilities (e.g., natural gas and petroleum). Since eBay has a relatively small footprint compared to companies that are covered under Cap and trade, this program (and other similar programs) do not apply to eBay.</td>
</tr>
<tr>
<td>Emerging regulation</td>
<td>Relevant, always included</td>
<td>The potential for fuel and energy taxes and regulations expose eBay to risk both in terms of increased costs and decreased revenue. Operationally, energy is an essential input to eBay Inc.’s business. Our platform relies on a data center portfolio that is responsible for more than 82% of our total energy consumption. Our customer support organization operates facilities 24 hours a day, 7 days per week, and our global staff count on being able to travel between offices and across geographies. Consequently, energy taxes and regulations could drive up energy prices, leading to increased costs to the company. eBay’s Global Impact team consults with our Government Affairs colleagues to identify any emerging regulation risks, such as carbon pricing schemes (e.g., the EU ETS related to aviation activities from non-commercial aircraft that we own and operate). With support from Government Affairs, we also advocate for clean energy policy, particularly in states where we have a significant operational footprint, including California and Utah.</td>
</tr>
<tr>
<td>Technology</td>
<td>Relevant, sometimes included</td>
<td>As an internet/e-commerce company, eBay is a recipient of energy products and services. eBay faces risks of not capitalizing upon technological improvements/innovations that support the transition to a low-carbon, energy efficient economy. For example, if eBay does not power its Utah data centers with renewable energy, while other e-commerce companies transition their data center electricity to renewables, eBay faces reputational risks compared to its competitors.</td>
</tr>
<tr>
<td>Legal</td>
<td>Relevant, sometimes included</td>
<td>This is a lower-likelihood risk for eBay. The company monitors all litigation as part of our Global Compliance and Legal Counsel teams’ active review of correspondence, including any potential climate-related litigation, and will alert the impact team if any potential or actual cases come to the Legal department’s attention. eBay could be indirectly exposed to litigation that imposes costs on our shipping partners, e.g., UPS, due to their fuel use. Similarly, lawsuits that resulted in extra costs for electricity providers could also affect eBay indirectly, if those energy providers decided to pass on the costs to their customers. These instances have not occurred, but they pose a potential, albeit unlikely, risk to the company.</td>
</tr>
<tr>
<td>Market</td>
<td>Relevant, always included</td>
<td>The potential for fuel and energy taxes and regulations expose eBay to risk both in terms of increased costs and decreased revenue. Our business model relies heavily on shipping and logistics, some of which is done directly by eBay Inc. businesses, but the majority of which occurs downstream of and out of our direct control. Increasing energy prices could quickly translate into higher shipping and logistics costs. These risks are monitored by our delivery and logistics teams. If those costs are passed on in the prices offered to customers on our commerce sites, this could drive down demand for on-line shopping. This could overall harm eBay’s business.</td>
</tr>
<tr>
<td>Reputation</td>
<td>Relevant, always included</td>
<td>Data centers can be a reputational risk, since they are known to be significant consumers of energy and are therefore significant carbon emitters. Reputational risk is monitored by our Government Relations team as well as our Data Center (CPT) team. eBay’s data centers comprise 80% of the company’s carbon footprint. In 2018, our data centers were responsible for approximately 83,000 tons of CO2e emissions. External stakeholders can use their platform to publicly criticize eBay’s non-renewable portions of electricity procurement, as Greenpeace has done in the past. This risk is qualitatively assessed in our climate risk process and communicated to our impact team as needed.</td>
</tr>
<tr>
<td>Acute physical</td>
<td>Relevant, always included</td>
<td>Hurricanes and floods could hurt shipping and impact customer demand. For example, during the 2018 Hurricane Michael events in Florida, many shipments from eBay sellers located in the southeast were delayed due to shipping network disruptions. Hurricane Florence had an impact, as well, as did other severe events in the past. In addition, electricity and telecommunication network disruptions can impact the ability of eBay customers, both sellers and buyers, to sell and make purchases online. The impact varies with the magnitude of the events and the concentrations of buyers, sellers, and shipping activities in the affected locations, but if the frequency and severity of weather events increases as climate change progresses, the risk will climb. Our Workplace Resources team actively monitors facility weather-related risk and Global Customer Service continually monitors online uptime and activity as part of our overall climate risk assessment.</td>
</tr>
<tr>
<td>Chronic physical</td>
<td>Relevant, always included</td>
<td>eBay has facilities in 33 countries around the world (see Q0.3). Some of these locations are more vulnerable than others to potential physical changes from climate change. For instance, in San Jose, CA, maps of potential sea level rise indicate that a 1 meter increase could submerge one of two major San Jose freeways and restrict access to the San Jose Airport, affecting the ability of employees and partners to travel to eBay’s headquarters in San Jose. Other risks could include disruption of our operations or physical damage to our facilities from floods, fires or other extreme weather events and possible sea level rise. Drought and other climate-related decreases in the availability of fresh water could also pose a risk to our operations. This is most particularly the case for our data center operations. Water is essential for cooling, and prolonged shortages could ultimately result in service interruptions and costly relocation of data center services, therefore our Data Center (CPT) team actively monitors and assesses the risk of water shortages as part of its operational risk assessment.</td>
</tr>
<tr>
<td>Upstream</td>
<td>Relevant, always included</td>
<td>eBay has a limited supply chain due to the nature of its business. However, energy and business travel are significant piece of our procurement. The potential for fuel and energy taxes and regulations expose eBay to risk both in terms of increased costs and decreased revenue. Operationally, energy is an essential input to eBay Inc.’s business. Our platform relies on a data center portfolio that is responsible for more than 82% of our total energy consumption. Our customer support organization operates facilities 24 hours a day, 7 days per week, and our global staff count on being able to travel between offices and across geographies. Consequently, energy taxes and regulations could drive up energy prices, leading to increased costs to the company. eBay’s Global Impact team consults with our Government Affairs colleagues to identify any emerging regulation risks, such as carbon pricing schemes. With support from Government Affairs, we also advocate for clean energy policy, particularly in states where we have a significant operational footprint, including California and Utah.</td>
</tr>
<tr>
<td>Downstream</td>
<td>Relevant, always included</td>
<td>The potential for fuel and energy taxes and regulations expose eBay to risk both in terms of increased costs and decreased revenue. Our business model relies heavily on shipping and logistics, some of which is done directly by eBay Inc. businesses, but the majority of which occurs downstream of and out of our direct control. Increasing energy prices could quickly translate into higher shipping and logistics costs which is closely monitored by our logistics and delivery teams. If those costs are passed on in the prices offered to customers on our commerce sites, this could drive down demand for on-line shopping. This could overall harm eBay’s business.</td>
</tr>
</tbody>
</table>
(C2.2d) Describe your process(es) for managing climate-related risks and opportunities.

Description of a process for managing climate-related risks

At the company level: eBay has a specific climate risk management process coordinated through the Global Impact (GI) function. Subject matter experts from the GI team actively engage with key global functions - finance, government relations, and operations teams – to evaluate climate risks annually and more frequently (at least every 6 months) for regions where our operational footprint is most significant, specifically our major data center locations (Utah, Arizona, Nevada), interpret them into a business risks framework and develop recommendations that can then be acted upon by decision makers.

- Description of a process for managing climate-related opportunities -

The team also consults external subject matter experts including REBA, World Wildlife Fund and 3rd party consultants to identify opportunities as well as social/policy/environmental issues that could materially impact our business. As opportunities are identified by our operational teams (e.g., Data Center, Compliance, Logistics and Delivery) and the appropriate teams evaluate and implement response measures. The Global Impact team is in touch with the operational teams at least quarterly to assess potential opportunities as they arise.

i) Case study/example of how process is applied to:

- Physical risks and/or opportunities

The physical risks related to climate change are currently considered to be long-term risks. However, measures currently being taken to increase the resiliency of our facilities will help manage physical climate-related risks, as well. For example, our Utah data centers operate according to industry-leading efficiency standard, using the minimum amount of water for cooling. Reduced water availability due to droughts is a risk in the region where the data centers are located. Their efficient operations will help better manage the impact of droughts.

- Transitional risks and opportunities

An example outcome from this process is eBay’s 100% renewable energy (RE) goal. In our 2016 ESG materiality assessment, energy was identified as a top stakeholder concern. The team partnered with finance and operations to assess the feasibility of renewable energy, and with the Global Communications team to assess reputation and other R/Os presented by setting the goal. Sign-off from these leaders was then taken to the executive leadership team for approval. Setting our 100% renewable energy goal included an assessment of the potential financial and reputation risks and opportunities. While it is likely that short term energy costs could rise as we implement renewable contracts, these are expected to be very modest and far surpassed by the reputation uplift (and risk avoidance) of committing to a low-carbon energy supply within the next 6 years (2025).

(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes

(C2.3a) Provide details of risks identified with the potential to have a substantive financial or strategic impact on your business.
**Identifier**
Risk 1

**Where in the value chain does the risk driver occur?**
Direct operations

**Risk type**
Transition risk

**Primary climate-related risk driver**
Policy and legal: Increased pricing of GHG emissions

**Type of financial impact**
Increased operating costs (e.g., higher compliance costs, increased insurance premiums)

**Company-specific description**
The potential for fuel and energy taxes and regulations expose eBay to risk both in terms of increased costs and decreased revenue. Operationally, energy is an essential input to eBay Inc.’s business. Our platform relies on a data center portfolio that is responsible for more than 82% of our total energy consumption. In 2018, our data centers were responsible for approximately 83,000 tons of CO2e emissions. Our customer support organization operates facilities 24 hours a day, 7 days per week, and our global staff count on being able to travel between offices and across geographies. Consequently, energy taxes and regulations could drive up energy prices, leading to increased costs to the company.

**Time horizon**
Long-term

**Likelihood**
About as likely as not

**Magnitude of impact**
Low

**Are you able to provide a potential financial impact figure?**
Yes, an estimated range

**Potential financial impact figure (currency)**
<Not Applicable>

**Potential financial impact figure – minimum (currency)**
7500000

**Potential financial impact figure – maximum (currency)**
15000000

**Explanation of financial impact figure**
Electricity purchases were about 0.5 to 1% of eBay’s total operating expense in 2018 (~$30 to 60M USD). Data centers were responsible for 80% of that consumption, with other facilities comprising the other 20%. Using a conservative assumption that regulations or taxes increase energy prices (vis a vis carbon emissions pricing) by 25%, that would increase energy spend by about $7.5 to 15M annually. The relative percent of Opex would remain unchanged. Business travel is an insignificant contributor, in terms of total % of spend for eBay.

**Management method**
(i) Action being implemented: eBay manages this risk by managing growth in energy consumption and its associated costs diversifying our energy supply to manage rate growth, and by advocating for policies that support a diverse energy market and provide predictability to future costs. (ii) Example of management: In early 2018 eBay began the roll out of smart meters across the highest energy consumption sites across EMEA with a view to reducing our electricity consumption by 10%. This has allowed us to measure real-time data and identify the effectiveness of projects such as kitchen upgrade in Dreilinden and LED Lighting upgrade in Dublin. In 2016 we also benefited when our largest co-location provider was able to add 100% renewable energy to its Las Vegas locations. Through our membership organizations we are actively advocating for policies that encourage a price on carbon and renewable energy availability at a price point at or near commercial rates. In 2018, eBay joined several other brands in supporting expanded renewable energy options for data centers in Virginia through a letter to its legislature. Cost, A conservative estimate is one full-time senior staff, which we estimate as approximately $250,000. Efficiency improvements represent cost savings, so no additional costs are anticipated for those programs. On-site energy generation requires additional up-front budget, both operational and capital that cannot be accurately quantified at this time.

**Cost of management**
250000

**Comment**
Identifier
Risk 2

Where in the value chain does the risk driver occur?
Customer

Risk type
Transition risk

Primary climate-related risk driver
Policy and legal: Increased pricing of GHG emissions

Type of financial impact
Increased operating costs (e.g., higher compliance costs, increased insurance premiums)

As a result of increased transportation energy prices

Company-specific description
The potential for fuel and energy taxes and regulations expose eBay to risk both in terms of increased costs and decreased revenue. Our business model relies heavily on shipping and logistics, some of which is done directly by eBay Inc. businesses but the majority of which occurs downstream of and out of our direct control. Increasing energy prices could quickly translate into higher shipping and logistics costs. If those costs are passed on in the prices offered to customers on our commerce sites, this could drive down demand for on-line shopping. We encourage our sellers to offer free and fast shipping options to their customers. For example, we have or are rolling out programs in specific markets to assist in faster delivery times (e.g., metropolitan areas in Germany). While these programs are attractive to buyers, there is an inherent cost of shipping that is at risk of increasing due to increased fuel costs. This could overall harm eBay's business.

Time horizon
Medium-term

Likelihood
About as likely as not

Magnitude of impact
Medium-low

Are you able to provide a potential financial impact figure?
Yes, an estimated range

Potential financial impact figure (currency)
<Not Applicable>

Potential financial impact figure – minimum (currency)
500000000

Potential financial impact figure – maximum (currency)
1000000000

Explanation of financial impact figure
Increased shipping costs could decrease the appeal of on-line buying and selling particularly for individual or small business sellers who do not enjoy the ability to negotiate favorable shipping contracts as a function of scale. It is hard to predict the relationship between increased costs and decreased selling activity, but for example, using our 2018 revenue of $10.7 billion, if there is a 5 to 10% reduction in activity, this could translate into $500 million to $1 billion in lost revenue.

Management method
(i) Action being implemented: eBay already works to help our sellers manage shipping costs. The cornerstone of our strategy takes advantage of our distributed seller base to drive down shipping distance, which is the driver of shipping time and cost. (ii) Example of management: eBay offers a diverse selection of logistics partners, negotiated flat-rate shipping supplies with carriers, and guidance on right-sizing shipping packaging. eBay’s new package selection feature allows sellers to use augmented reality to select the smallest package for a given item. This helps avoid excessive weight and volume of packaging, helping reduce CO2 emissions and mitigate the risk of increased fuel prices. This allows customers to enjoy lower shipping costs by benefiting from economies of scale. Additionally, eBay will continue to encourage adoption of low-carbon and electric transportation with our primary logistics partners, including UPS and FedEx. (iii) Cost Augmentation and expansion of existing programs to manage shipping costs are most likely to increase rather than decrease eBay revenue, so cost of management is essentially zero.

Cost of management
0

Comment
Where in the value chain does the risk driver occur?
Customer

Risk type
Physical risk

Primary climate-related risk driver
Chronic: Changes in precipitation patterns and extreme variability in weather patterns

Type of financial impact
Reduced revenues from lower sales/output

Also including reduced consumer spending power

Company-specific description
eBay is a global commerce company whose customers include hundreds of millions of users and millions of businesses. These individuals and companies could be affected by any number of climate change issues - including the financial impacts of fuel price volatility and sea level rise, caused by the changes in precipitation and variability in weather patterns. - which could present a general risk to our business through decreased access to and traffic on our platform when electricity is not available or when people are displaced from their homes. Our users may spend less time on our websites and our applications for mobile devices as a result of a variety of climate change-related diversions caused by volatility in weather, including: geopolitical events, such as war; natural disasters; power shortages or outages from weather events; major public health issues from drought, including pandemics; and other significant local, national or global events capturing the attention of a large part of the population. If any of these, or any other climate-related factors, divert our users from using of our websites or mobile applications, our business could be materially adversely affected. For example, the hurricanes (including Hurricanes Michael and Florence) in 2018 had an impact on eBay’s transactions and revenue because many shipments from eBay sellers located in in the southeast were delayed due to shipping network disruptions. While the exact amount was difficult to determine due to a combination of factors impacting sales at that time, external data indicate that retail spending decreases during the weeks directly impacted by sever hurricanes.

Time horizon
Long-term

Likelihood
About as likely as not

Magnitude of impact
Medium-low

Are you able to provide a potential financial impact figure?
Yes, a single figure estimate

Potential financial impact figure (currency)
52000000

Potential financial impact figure – minimum (currency)
<Not Applicable>

Potential financial impact figure – maximum (currency)
<Not Applicable>

Explanation of financial impact figure
Diversion of users away from using our platforms could adversely affect our business results. For instance, using 2018 revenue of $7.4B for the eBay Marketplace, a prolonged 10% decrease in shopping on our that platform due to multiple weather events could mean as much as a 7% decrease in overall revenue (~$520M USD).

Management method
(i) Action being implemented: The diversification of eBay’s business provides customers with options that could help mitigate lower demand for on-line shopping by offering new and augmented shopping experiences. (ii) Example of management: For instance, in 2018 we continued to expand our intermediate selling services to increase customer convenience, such as eBay Consignment, eBay Authenticate, and Buy Online/Pickup in Store with select sellers, and pickup/dropoff lockers in major stores, like Argos in the UK. These are examples of how evolving programs can help reduce the business impacts of climate change. (iii) Cost -Managing changing consumer behavior is inherent in eBay’s business model, so no additional management costs are anticipated at this time.

(C2.4) Have you identified any climate-related opportunities with the potential to have a substantive financial or strategic impact on your business?
Yes

C2.4a

(C2.4a) Provide details of opportunities identified with the potential to have a substantive financial or strategic impact on your business.

**Identifier**
Opp1

**Where in the value chain does the opportunity occur?**
Customer

**Opportunity type**
Products and services

**Primary climate-related opportunity driver**
Shift in consumer preferences

**Type of financial impact**
Increased revenue through demand for lower emissions products and services

**Company-specific description**
Climate-related regulations are likely to result in increased prices for fuel and commodities, with some geographies experiencing higher price pressure than others. eBay Inc.'s portfolio companies, particularly the Marketplaces and Classifieds businesses, could benefit financially from this primarily by driving increased interest in pre-owned items due to increased fuel and commodities prices resulting in driving up the price of new goods overall, eBay is one of the world's largest marketplaces for pre-owned goods – for instance, more than 1 million pre-owned smartphones were sold on eBay in the US and UK alone in 2018. A trend toward pre-owned over new items could translate into increased sales and revenue for eBay, as well as avoided carbon emissions and downstream economic benefit for buyers. The circular economy is an important part of eBay's business model. We have a public goal to create $2.5 billion in positive economic impacts and avoid 2.5 million metric tons of carbon emission through the sale of pre-owned electronics and apparel by 2020. Since 2016 we have created $2 billion in additional impact and avoided 1.7 million metric tons through the sale of these goods.

**Time horizon**

**Potential financial impact figure – maximum (currency)**
<Not Applicable>

**Explanation of financial impact figure**
Changes in shopping behavior toward more on-line shopping, both for pre-owned goods, could increase eBay revenue. For
example, using 2018 Marketplace revenue of $7.4 billion, and accounting for the portion of pre-owned goods sold on our platform, a 5% increase in on-line shopping would translate to approximately $100 million in additional revenue from pre-owned goods alone.

**Strategy to realize opportunity**

The fundamental and foundational premise behind our company is to lower entrance barriers for people to participate in trade. By creating a more level playing field, we are able to champion local entrepreneurs and small businesses and provide them with access to global markets. Our ability to extend the life cycle of products is central to our brand promise. The concept of “circular commerce” has been part of our brand since the very beginning, including the sale of our first pre-owned item, a broken laser pointer. “Circular commerce” is also an important part of our forward-looking brand strategy. As such, we are actively pursuing new ways to advance circular commerce by using innovative technologies. For example, eBay Consignment (intermediated selling) and Click & Collect, which offers eBay pickup/dropoff lockers in major stores, make it easier and more convenient to sell pre-owned items. In 2018, PayPoint and eBay signed a strategic partnership that enables eBay sellers and buyers to access the Collect+ network for convenient click and collect parcel services, adding an additional 2,500 stores to the Click & Collect network in the UK. Our Click and Collect service in the UK, lets users drop off and pick up eBay items (both new and pre-owned) without a trip to the post office. Managing and responding to changing consumer behavior is inherent in eBay’s business model, so no additional management costs are anticipated at this time.

Opp2

**Where in the value chain does the opportunity occur?**

Supply Chain

**Opportunity type**

Products and services

**Primary climate-related opportunity driver**

Development and/or expansion of low emission goods and services

**Type of financial impact**

Increased revenue through new solutions to adaptation needs (e.g., insurance risk transfer products and services)

**Company-specific description**

eBay has evaluated likely changes in the cost of transportation and logistics across our four geographies of operations: North America, Asia-Pacific, Latin America and Europe-Middle East-Africa, as well as in terms of their impacts on our marketplaces. We have concluded that eBay could realize indirect benefits if increased fuel costs in other markets increase the cost of shipping product to customers. We have characterized this opportunity as our supply chain because of eBay’s unique business model – where we do not directly control logistics or shipping to our seller’s customers. However, due to rising fuel costs, if our primary logistics partners make improvements to operate more efficiently, then these benefits will ultimately be realized by our customers. To realize these benefits, eBay can continue to encourage adoption of low-carbon and electric transportation with our primary logistics partners, including UPS and FedEx. Because much of online shopping is based on consumer convenience, we encourage our sellers to offer low-cost or free and fast shipping. By working with logistics partners, we can help to alleviate potential cost increases for shipping by emphasizing the importance of low-carbon transport options when traditional fuel prices continue to rise. This will in turn help us to retain and expand our customer base.

**Are you able to provide a potential financial impact figure?**

Yes, a single figure estimate

**Potential financial impact figure (currency)**

750000000

**Potential financial impact figure – minimum (currency)**

<Not Applicable>
Potential financial impact figure – maximum (currency)
<Not Applicable>

Explanation of financial impact figure
Increased commerce activity (or decrease in commerce costs) could financially benefit eBay. For instance, using 2018 revenue of $7.4B for the eBay Marketplace, a 10% increase in shopping due to low cost expedited shipping and convenience on our platform could mean as much as a 7% increase in overall eBay revenue ($10.7B), which amounts to $750M.

Strategy to realize opportunity
eBay’s portfolio of businesses (Marketplaces, StubHub, Classifieds) is constantly assessing and responding to changing customer requirements and consumer sentiment. This includes making sure we have sellers offering low-cost expedited shipping. eBay maintains strong relationships with carrier partners to make the shipping that happens via eBay easier, more cost effective and more reliable. For instance, in 2016 eBay partnered with FedEx to bring eBay Valet drop-off locations to over 1600 FedEx Kinkos locations (although this program was sun-setted in mid-2018). This program, the Click and Collect and eBay Consignment programs greatly simplify the selling process, particularly for new sellers. These types of programs will continue to be essential as commerce adapts to climate change opportunities. Managing and responding to changing consumer behavior is inherent in eBay’s business model, so no additional management costs are anticipated at this time.

Where in the value chain does the opportunity occur?
Direct operations

Opportunity type
Energy source

Primary climate-related opportunity driver
Use of lower-emission sources of energy

Type of financial impact
Other, please specify (increased revenue through brand reputation and decreased operational costs)

Company-specific description
Investors are increasingly expecting companies to manage their climate risk and look for financial opportunity in a low-carbon market. eBay’s approach to climate change prioritizes the procurement of renewable energy, which will decrease the carbon footprint and stabilize operating costs of our business. For example, our headquarters is in San Jose, California where the grid is primarily powered by natural gas in a pseudo deregulated market with only single-option utilities that control pricing. Our only owned data base is in Salt Lake City, Utah, a fully regulated market. Even with these constraints to easily access renewable energy at a reasonable cost, eBay recognized the importance of achieving 100% renewable energy in our offices and data centers and has committed to RE100 by 2025. Putting in place financially feasible solutions now will give us the opportunity to stabilize or reduce energy costs relative to non-renewable options in the future. In addition, consumers are increasingly aligning their personal values with buying behaviors and are looking for shopping destinations that support their choices and beliefs. eBay can be an appealing brand for consumers who value sustainability, which can lead in increased demand for eBay’s products, and therefore stock prices.

Time horizon
Medium-term

Likelihood
About as likely as not

Magnitude of impact
Medium-low

Are you able to provide a potential financial impact figure?
Yes, a single figure estimate

Potential financial impact figure (currency)
37700000

Potential financial impact figure – minimum (currency)
<Not Applicable>

Potential financial impact figure – maximum (currency)
Explaination of financial impact figure

eBay does business in a strongly competitive environment that is under increasing scrutiny from stakeholders such as investors. Increased positive brand recognition and sentiment could translate into positive competitive advantage and increased stock price. For example, as of 7/18/18, eBay's Market capitalization was $37.7 billion. A 0.1% increase in the market cap would amount to $37.7 million.

Strategy to realize opportunity

As a member of RE100, eBay has set a goal to use 100% renewable energy in our electricity supply by 2025 at eBay-controlled data centers and offices. We are on track to achieve this goal by participating in local utility-driven green power programs, such as the City of San Jose's Clean Energy program at our headquarters in San Jose, Calif. We are also actively pursuing Power Purchase Agreements (PPAs) in deregulated markets and are assessing the feasibility of other onsite renewables in addition to our solar array in Salt Lake City, Utah. We have devised a step-wise plan to incrementally get to 100% renewable over the next 5 and a half years. This plan is regularly reviewed and re-assessed for feasibility and advancements in the market, especially in Asia, where we have a significant presence in South Korea. In addition to achieving this goal, we recognize the need to promote our progress to attract and retain customers. The Impact team deepens engagement with stakeholders and other companies on climate and renewable energy issues through strategic memberships, such as Ceres’ BICEP and the Renewable Energy Buyers Alliance. Stakeholder engagement, transparency and related external activities are a normal part of our work, so we expect no additional costs to be incurred in communicating about our response to climate change or renewable energy achievements. However, we have staff dedicated to our renewable energy strategy This management cost equates to about a ½ FTE.

**C2.6**
(C2.6) Describe where and how the identified risks and opportunities have been factored into your financial planning process.

<table>
<thead>
<tr>
<th>Relevance</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Revenues</td>
<td>Impacted - A description of the impact on this area of your financial planning process eBay's transaction volume, and therefore revenue, was impacted by Hurricane Michael and other hurricanes that occurred in 2018. Because we expect that disruptive weather events will continue to occur, our financial planning includes contingencies for these potential dips in revenue. - A description of the magnitude of this impact While eBay saw some impact within the areas that were affected, there are many dynamics driving our results and therefore opt to not quantify the impact of the events. However, using 2018 eBay revenue of $10.7 billion, even a 0.5% impact amounts to $53 million, which is a significant amount.</td>
</tr>
<tr>
<td>Operating costs</td>
<td>Not yet impacted - A description of the potential/predicted impact on this area of your financial planning process eBay does not have significant facility presence in areas that have been affected by climate-related events, no impact has yet been recorded. However, business disruptions as well as physical damage to facilities, such as our San Jose headquarters or our data centers in Utah, could increase costs and have potentially negative revenue impacts by restricting or disrupting access to our platforms and services. Using 2018 revenue of $10.7 billion, a 5% reduction in productivity, could mean $535 million in lost revenue. - A description of the potential/predicted timescale for the impact This is expected to be a longer-term impact, 10 years or later.</td>
</tr>
<tr>
<td>Capital expenditures / capital allocation</td>
<td>Not yet impacted - A description of the potential/predicted impact on this area of your financial planning process eBay does not have significant facility presence in areas that have been affected by climate-related events, no impact has yet been recorded to date. However, business disruptions as well as physical damage to facilities, including our data centers in Utah, could, in a worst case scenario, necessitate moving all computing and processing to other non-owned facilities while assessing options for rebuilding or re-siting the damaged data center. Rebuilding a data center could cost 100's of millions of dollars in capital expenditure. Planning for this magnitude of capital allocation would likely result in finding other nearer term solutions, including expansion of colo usage. - A description of the potential/predicted timescale for the impact We do not foresee any immediate need to rebuild or replace our owned data center and therefore the timeframe for this impact is expected longer-term, 10 years or later.</td>
</tr>
<tr>
<td>Acquisitions and divestments</td>
<td>Not impacted - A description of why the impact has not affected this area of your financial planning process There are many likely reasons why climate-related impacts have not affected eBay's acquisitions and divestments, chief among them is that the company is an e-commerce company, and doesn't own inventory or manufacture products, or own/acquire enough physical infrastructure to meet the thresholds of climate change impacts.</td>
</tr>
<tr>
<td>Access to capital</td>
<td>Not yet impacted - A description of the potential/predicted impact on this area of your financial planning process eBay's customer transactions have not been affected by climate-related events to the extent that the company's credit-worthiness, higher interest rate loans, and access to capital would be affected. The finance team continues to monitor our credit rating closely. - A description of the potential/predicted timescale for the impact However, in the long-term (10+ years), it is possible that climate events could affect the company's access to capital positively or negatively. If climate change increases demand for pre-owned goods on eBay's Marketplaces and Classifieds platforms, then the company's customer base and revenue streams could increase, supporting a higher credit rating and access to capital.</td>
</tr>
<tr>
<td>Assets</td>
<td>Not yet impacted - A description of the potential/predicted impact on this area of your financial planning process eBay's assets, such as office buildings and data centers, could be impacted in climate-related events, such as hurricanes and sea level rise. Business disruptions as well as physical damage to facilities could increase costs and have potentially negative revenue impacts by restricting or disrupting access to our Marketplaces, StubHub and Classifieds platforms and services. Using 2018 revenue of $10.7 billion, a 5% reduction in productivity, could mean $535 million in lost revenue. - A description of the potential/predicted timescale for the impact The timescale for this impact is long-term, 10 years or longer.</td>
</tr>
<tr>
<td>Liabilities</td>
<td>Not yet impacted - A description of the potential/predicted impact on this area of your financial planning process eBay's liabilities have not been influenced by climate change or related factors. However, increased interest rates could have a significant impact on our PNL, possibly in the tens of millions annually. - A description of the potential/predicted timescale for the impact However, in the long-term (10+ years) it is possible that climate damage to physical assets (such as our San Jose facilities due to sea level rise) or needs for upgrades or relocation (such as our Utah data centers due to lack of water for cooling) could cause eBay to borrow funds, thus increasing the company's liabilities.</td>
</tr>
<tr>
<td>Other</td>

C3. Business Strategy

C3.1

(C3.1) Are climate-related issues integrated into your business strategy?
Yes

C3.1a

(C3.1a) Does your organization use climate-related scenario analysis to inform your business strategy?
No, but we anticipate doing so in the next two years
C3.1c

(C3.1c) Explain how climate-related issues are integrated into your business objectives and strategy.

- An explanation of how business objectives and strategy have been influenced by climate-related issues. Needs to be company-specific.

In 2016, eBay conducted a materiality analysis. The two priority focus areas (of 5 total) related to climate that were identified in our materiality analysis – energy and sustainable consumption. The materiality assessment and suggested potential goals to address these issues, were presented to eBay’s CEO and Board of Directors for review. They in turn tasked the Global Impact team with facilitating a goal-setting process across the appropriate functional areas and business units. For energy, this included both the Critical Infrastructure Engineering (CIE) and Workplace Resources (WPR) teams, as well as Government Relations and Finance. To address sustainable consumption, the process included the North America and UK eBay Marketplaces teams. These goals were set and included in our 2017 Impact Progress Update report and additional progress was included in our 2018 Update.

- Business strategy is linked to an emissions reductions target or energy reduction target

Through a collaborative process, eBay performed benchmarking to understand the RE aspirations of peer companies to qualitatively assess the potential reputation impact of an ambitious renewable energy target (and reputation risk without one). Using that information, as well as market and cost analyses, the cross-functional team developed a suggested timeline, estimated costs, and known R/Os of a 100% renewable energy target, which was ultimately approved by executive leadership. In 2018, we subsequently revised our carbon reduction goal to align with the new 1.5 degree IPCC scenario analyses. This goal is also reported in our 2018 Progress Update.

- At least one example of the most substantial business decision made (or if none, this is stated) as a result of the integration of climate-related issues (both the business decision and the aspect of climate change that has influenced the business decision must be made clear)

Setting a 100% renewable energy target by 2025 was the most substantial business decision made that was influenced by climate change. In 2018, eBay updated its multi-pronged, global strategy for achieving this goal and through multiple efforts is currently at 50% renewable energy. This far surpasses in ambition the only other renewables goal made in the company’s history (8% of total electricity from renewable sources by 2015, set in 2012) and reflects an increased priority on reducing the carbon intensity of eBay’s business as our most direct way to respond to risks presented by climate change. The primary aspects of climate change that influenced this decision are operational/regulatory and reputational risks that climate change poses to the business. Operational and regulatory risks are risks of increased energy costs due to carbon regulations – shifting to 100% renewable electricity is a hedge against that risk. Reputational risks stem from consumer trends – consumers increasingly demand that companies conduct their business sustainably and ethically, and failing to address climate change issues would reflect poorly on eBay compared to its competitors.

C3.1g
(C3.1g) Why does your organization not use climate-related scenario analysis to inform your business strategy?

- A description of why climate-related scenario analysis is not used to inform your business strategy

eBay is still gathering information required to apply a climate-scenario analysis to inform business strategy. In addition, as a company with a very limited supply chain (the majority of our upstream procurement spend is on office and data center technology and corporate services and we do not manufacture products) and a significantly smaller footprint than heavy industrial companies (our carbon footprint is less than 1% of a major US cement producer and less than 30% of a US based technology company) eBay requires significant time to obtain buy-in from internal stakeholders for potentially using a climate-related scenario analysis.

- A description of how you plan to implement climate-related scenario analysis

The eBay Impact team will coordinate with other eBay departments (e.g. parts of Finance, Risk Management, Government Relations) to determine an appropriate climate-related scenario and conduct a company-wide assessment similar to the present risk analysis process.

To perform the climate-related scenario analysis, eBay plans to conduct the following steps over two years: (1) Establish an analysis oversight committee at the highest possible level (ideally Executive team or Board members); (2) Determine the materiality of climate risks, such as physical risks to data center operations or regulatory risks, such as carbon taxes that increase shipping costs; (3) Select scenario(s) that are most appropriate, involving external technical experts as needed; (4) Evaluate business impacts, such as interruptions to data center operations or increases in shipping costs; (5) Identify potential responses, such as investing in low-carbon shipping technologies or making data center operations more drought-resistant.

Comment

C6.4

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?

Yes
C6.4a Provide details of the sources of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure.

Source
Sites determined to be de minimis

Relevance of Scope 1 emissions from this source
Emissions are not relevant

Relevance of location-based Scope 2 emissions from this source
Emissions are not relevant

Relevance of market-based Scope 2 emissions from this source (if applicable)
Emissions are not relevant

Explain why this source is excluded
De minimis sites consist of small service offices without full-time staff and for which eBay does not have access to complete and reliable information for the period in question

Source
Fuel use by small vehicles/equipment

Relevance of Scope 1 emissions from this source
Emissions are not relevant

Relevance of location-based Scope 2 emissions from this source
No emissions from this source

Relevance of market-based Scope 2 emissions from this source (if applicable)
No emissions from this source

Explain why this source is excluded
It is likely that small amounts of diesel and gasoline consumption by campus and other support vehicles are not included in Scope 1 emissions estimates. eBay considers these emissions to be an insignificant contributor to the overall Scope 1 inventory total

C6.5

(C6.5) Account for your organization’s Scope 3 emissions, disclosing and explaining any exclusions.

Purchased goods and services

Evaluation status
Relevant, calculated

Metric tonnes CO2e
315000

Emissions calculation methodology
Emissions were calculated using Aligned Incentives’ input-output life cycle assessment approach for 100% spend data for purchased goods and services over the reporting period. All values represent cradle-to-gate emissions across all GHG emissions identified in the GHG Protocol Value Chain Standard, using GWP values from the IPCC Fifth Assessment Report.

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Explanation
**Capital goods**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
77000

**Emissions calculation methodology**
Emissions were calculated using Aligned Incentives' input-output life cycle assessment approach for 100% spend data for capital goods over the reporting period. All values represent cradle-to-gate emissions across all GHG emissions identified in the GHG Protocol Value Chain Standard, using GWP values from the IPCC Fifth Assessment Report.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**

**Fuel-and-energy-related activities (not included in Scope 1 or 2)**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
54000

**Emissions calculation methodology**
Emissions were calculated using data on eBay's energy consumption across eBay's site offices and data centers. Emissions factors represent upstream emissions from the production and transportation of fuels consumed by eBay sites in the reporting year as well as T&D losses associated with electricity use. For electricity, upstream fuel consumption was based on a location-based method, using the fuel mix for the local grid for each facility to calculate supply chain emissions. Values were calculated using GWP values from the IPCC Fifth Assessment Report.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**

**Upstream transportation and distribution**

**Evaluation status**
Relevant, calculated

**Metric tonnes CO2e**
51000

**Emissions calculation methodology**
Emissions were calculated using Aligned Incentives' input-output life cycle assessment approach for 100% spend data for transportation and other logistics services over the reporting period. All values represent cradle-to-gate emissions across all GHG emissions identified in the GHG Protocol Value Chain Standard, using GWP values from the IPCC Fifth Assessment Report.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Explanation**
Waste generated in operations

**Evaluation status**  
Relevant, calculated

**Metric tonnes CO2e**  
12000

**Emissions calculation methodology**  
All emissions associated with purchased waste management services were calculated using estimated total spend on waste management and emission factors derived from country-specific production functions from the U.S. national input-output database. See explanation for additional information. Emissions associated with the offsite treatment of wastewater were derived bottom-up using location-adjusted unit processes to reflect the local energy mix required to process wastewater across eBay's facilities worldwide. All values represent cradle-to-gate emissions across all GHG emissions identified in the GHG Protocol Value Chain Standard, using GWP values from the IPCC Fifth Assessment Report.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**  
0

**Explanation**  
Physical waste data for a bottom up analysis were not available at the time of this analysis, and thus a spend analysis was required. Lack of granularity in utility spend made it very difficult to parse out spend on waste management. As such, the average percentage spend on waste management by the data processing and hosting industry was used to estimate eBay’s total spend for these topics. This method is likely to overestimate actual emissions but given that this category represents a small proportion of our total footprint, this method was considered reasonable.

Business travel

**Evaluation status**  
Relevant, calculated

**Metric tonnes CO2e**  
15000

**Emissions calculation methodology**  
Values represent all emissions associated with purchased air travel, rental cars and lodging. Emissions from air travel and rental cars were calculated using miles flown and driven in rental cars by eBay employees and emissions factors specific to air travel distance and average emissions per mile for rental cars. Emissions from lodging were calculated using Aligned Incentives’ input-output model and eBay’s spend data on lodging. Rail travel and rental cars: EPA Climate Leaders Optional Emissions from Commuting, Business Travel and Product Transport. (EPA430-R-08-006)

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**  
95

**Explanation**  
All emissions reported, except those associated with lodging, were calculated using data provided by suppliers. Business travel emissions decreased during 2018 for all sources except for Jet Fuel due in large part to company-wide efforts to limit trips and more intensely utilize telepresence and other communication technologies.

Employee commuting

**Evaluation status**  
Relevant, calculated

**Metric tonnes CO2e**  
30000

**Emissions calculation methodology**  
Emissions were estimated using the total number of eBay employees, an assumed breakdown of commuting patterns (mode and distance) based on American Community Survey Reports published by the U.S. Census Bureau and average emissions factors for U.S. automobiles and mass transit from WRI’s GHG Protocol Calculation Tools. Biodiesel fuel used in shuttles: Mandatory Reporting of GHG; Final Rule (40 CFR 98) - Commercial Sector Applicable as of 11/29/2013.

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**  
1

**Explanation**  
eBay Inc. provides employee shuttles in between San Francisco and our two San Jose campuses.
Upstream leased assets

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**
<Not Applicable>

**Emissions calculation methodology**
<Not Applicable>

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
<Not Applicable>

**Explanation**
The emissions from eBay's leased assets (real estate) are accounted for under Scope 1 & 2.

Downstream transportation and distribution

**Evaluation status**
Not relevant, explanation provided

**Metric tonnes CO2e**
<Not Applicable>

**Emissions calculation methodology**
<Not Applicable>

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
<Not Applicable>

**Explanation**
eBay does not produce goods for sale. Our “product” is our platform, whose emissions are accounted for under Scope 1 & 2.

Explanation

C6.7

(C6.7) Are carbon dioxide emissions from biologically sequestered carbon relevant to your organization?
No

C6.10
(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure
0.00001

Metric numerator (Gross global combined Scope 1 and 2 emissions)
107327

Metric denominator
unit total revenue

Metric denominator: Unit total
10746000000

Scope 2 figure used
Market-based

% change from previous year
23

Direction of change
Decreased

Reason for change
Renewable energy percentage increased due to additional renewable energy coverage for San Jose South, SJ Orchard, LVS04, and US RECs, carbon emissions decreased due to efforts including energy efficiency in building controls, and our company gross revenue increased, resulting in a decreasing intensity figure per $1 revenue.

Intensity figure
8

Metric numerator (Gross global combined Scope 1 and 2 emissions)
107327

Metric denominator
full time equivalent (FTE) employee

Metric denominator: Unit total
14000

Scope 2 figure used
Market-based

% change from previous year
13

Direction of change
Decreased

Reason for change
Renewable energy percentage increased due to additional renewable energy coverage for San Jose South, SJ Orchard, LVS04, and US RECs, carbon emissions decreased due to efforts including energy efficiency in building controls, and our company FTEs increased, resulting in a decreasing intensity figure per FTE.

C7. Emissions breakdowns

C7.1

(C7.1) Does your organization break down its Scope 1 emissions by greenhouse gas type?
Yes
(C7.1a) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used greenhouse warming potential (GWP).

</tbody>
</table>
C7.9

(C7.9) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

Decreased

C7.9a

(C7.9a) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined) and for each of them specify how your emissions compare to the previous year.

<table>
<thead>
<tr>
<th>Change in emissions (metric tons CO2e)</th>
<th>Direction of change</th>
<th>Emissions value (percentage)</th>
<th>Please explain calculation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Change in renewable energy consumption</td>
<td>8805</td>
<td>Decreased 7</td>
<td>Due to additional renewable energy coverage for San Jose South, SJ Orchard, LVS04, and US RECs and reduced renewable energy coverage for Salt Lake Draper and Portland sites, we estimate that the S2 emissions decreased compared to the previous year by 8,805 tCO2e. Therefore, we arrived at 7% through (\frac{8,805}{121,373} \times 100 = 7%)</td>
</tr>
<tr>
<td>Other emissions reduction activities</td>
<td>14274</td>
<td>Decreased 12</td>
<td>Due to emission reduction activities implemented during the year as detailed in CC4.3, including energy efficiency in building controls. In 2018, 14,274 tCO2e were reduced and our total S1 and S2 emissions in the previous year were 121,373 tCO2e, therefore we arrived at 12% through (\frac{14,274}{121,373} \times 100 = 12%)</td>

C10.2

(C10.2) Do you verify any climate-related information reported in your CDP disclosure other than the emissions figures reported in C6.1, C6.3, and C6.5?

No, but we are actively considering verifying within the next two years

C11. Carbon pricing

C11.1

(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?

Yes

C11.1a

(C11.1a) Select the carbon pricing regulation(s) which impacts your operations.
EU ETS

C11.1b
(C11.1b) Complete the following table for each of the emissions trading systems in which you participate.

<table>
<thead>
<tr>
<th>EU ETS</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>% of Scope 1 emissions covered by the ETS</td>
<td>1</td>
</tr>
<tr>
<td>Period start date</td>

<tr>
<td>Comment</td>
<td>From 1 January 2012 all flights which arrive at or depart from an aerodrome situated in the territory of a Member State to which the Treaty applies shall be included. Flights which depart from or arrive in an aerodrome situated in the territory of a Member State to which the Treaty applies. This activity shall not include from 1 January 2013 to 31 December 2020, flights which, but for this point, would fall within this activity, performed by a non-commercial aircraft operator operating flights with total annual emissions lower than 1,000 tonnes per year and fewer than 243 flights per period for three consecutive four-month periods. In 2018, eBay's total Annex 1 flight segments totaled 8 flights and total emissions totaled 278.362 metric tons CO2e. For this reason, eBay received a certification of exemption from the verification of an annual emissions report and the surrender of carbon offsets for all Annex 1 activities.</td>
</tr>
</tbody>
</table>

(C11.1d) What is your strategy for complying with the systems in which you participate or anticipate participating?

In 2018, eBay's total Annex 1 flight segments totaled 8 flights and total emissions totaled 278.362 metric tons CO2e. For this reason, eBay received a certification of exemption from the verification of an annual emissions report and the surrender of carbon offsets for all Annex 1 activities.

eBay anticipates that our total annual non-commercial aircraft emissions will be lower than 1,000 tonnes per year and fewer than 243 flights per period for three consecutive four-month periods in future years. Therefore, eBay will continue to receive a certification of exemption from the verification of an annual emissions report and the surrender of carbon offsets for all Annex 1 activities. In order to achieve the low emissions trajectory for aircraft, eBay will continue to employ a senior management review system to ensure that approved travel is business critical.

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?

No

(C11.3)
C11.3 Does your organization use an internal price on carbon?
No, but we anticipate doing so in the next two years

C12. Engagement

C12.1

(C12.1) Do you engage with your value chain on climate-related issues?
Yes, our suppliers
Yes, other partners in the value chain

C12.1a

(C12.1a) Provide details of your climate-related supplier engagement strategy.

Rationale for the coverage of your engagement
eBay has a relatively minimal supply chain because we do not hold inventory or sell manufactured products. eBay’s main service is the internet platform used by our buyers and sellers, and the suppliers most relevant to the platform are the data center colocation providers where our servers reside. We have over 500 tier 1 suppliers, however only a very small number of them are colo data center providers, hence the % of suppliers by number is only 1.

Impact of engagement, including measures of success
In 2016 our largest provider, Switch, converted all of its locations in Nevada to renewable power, resulting in a nearly 50% reduction in our data center-related GHG emissions. While not a direct result of eBay’s Colo and Cloud Buyer’s Principles participation, we purposefully engaged with REBA and Future of Internet Power buyer members to encourage colo providers to offer renewable energy at their facilities. Due to our 100% renewable energy goal, having Switch convert to 100% renewables at the eBay sites was critical to our path to 100% and a measure of our successful engagement. We continue to monitor the contribution of these footprints to our overall renewable strategy on an annual basis. Moving load from or to these facilities has a direct impact on our overall achievement of RE100 and necessitates determining if additional and new approaches will be needed. Switch’s participation in renewable procurement was factored into our overall success, where our threshold for these facilities is to contribute 20 to 25% of our total RE footprint. Spend % is approximate for proprietary reasons. Number of suppliers: <10 eBay engages with its colocation service providers by being a founding member of the Future of Internet Power working group, which has the goal of powering the internet with 100% renewable energy. In 2016 this group created, and eBay signed, the Corporate Co-Location and Cloud Buyers’ Principles. These principles outline six criteria that companies using colo services would like to see their colo service providers meet, such as providing data on customer energy consumption, disclosing facility energy sources, and supporting renewable energy advocacy efforts. eBay has been engaging our co-location providers about cleaner energy for about 5 years, and the Principles offer another tool for continuing that engagement. It is also important to note that we report 0 Scope 3 emissions above because we consider these emissions under our Scope 2 footprint.

Comment
(C12.1c) Give details of your climate-related engagement strategy with other partners in the value chain.

- A company specific description of your climate-related engagement strategy with other partners in the value chain

eBay has evaluated climate-related logistics and transportation parameters across our four geographies of operations: North America, Asia-Pacific, Latin America and Europe-Middle East-Africa, as well as in terms of their impacts on our marketplaces. We have concluded that eBay could realize indirect benefits if loosening US transportation fuel standards and increased fuel costs in other markets increase the cost of shipping product to customers.

- A clear explanation of who ‘other partners in the value chain’ constitutes

To realize these benefits, eBay can continue to encourage adoption of low-carbon and electric transportation with our primary logistics partners, including UPS and FedEx. (which are not considered our direct suppliers in this context). Because much of online shopping is based on consumer convenience, we encourage our sellers to offer low-cost or free and fast shipping. By working with logistics partners, we can help to alleviate potential cost increases for shipping by emphasizing the importance of low-carbon transport options when traditional fuel prices continue to rise. This will in turn help us to retain and expand our customer base.

(C12.3) Do you engage in activities that could either directly or indirectly influence public policy on climate-related issues through any of the following?
- Direct engagement with policy makers
- Trade associations
- Other

(C12.3a) On what issues have you been engaging directly with policy makers?

<table>

<tr>
<td>Cap and trade</td>
<td>Support</td>
<td>eBay is a strong supporter of climate action nationally and in our headquarters state of California. We were a business voice in support of the landmark AB32 legislation and have continued to support state policy to strengthen and clarify AB 32 implementation. While AB32 was game changing, the emissions reduction mandates only extended through 2020. To continue momentum and address the need for larger GHG reductions globally, it was proposed the state create a more ambitious target and extend these targets to 2030. At the request of NGO stakeholders, eBay reached out to individual law makers to encourage their support of the bill. We also participated in the Ceres-led LEAD on carbon pricing event in Washington, DC in the first half of 2019.</td>
<td>Extend the GHG emissions reductions required by California AB32 beyond 2020, mandating a 40% reduction by 2030. Senate Bill 32 was signed by the governor in September 2016 LEAD did not propose a particular solution but opened direct dialog with members on both sides of the house and senate around general carbon pricing options.</td>

(C12.3b) Are you on the board of any trade associations or do you provide funding beyond membership?

Yes

(C12.3c)
(C12.3c) Enter the details of those trade associations that are likely to take a position on climate change legislation.

**Trade association**
TechNet

**Is your position on climate change consistent with theirs?**
Consistent

**Please explain the trade association’s position**
TechNet advocates for a robust energy policy that encourages true competition in the energy market. TechNet also supports state policies to spur deployment of clean energy resources such as fuel cells, solar, wind, demand-side, advanced clean combustion, and clean transportation, and will work diligently to advance them. TechNet also supports smart grid technologies that increase the reliability and resilience of the electric grid; enable clean technologies and electric vehicles; and help consumers reduce their electric bills. TechNet supports empowering consumers with access to their energy data and new tools to help consumers cut energy use. TechNet also supports efforts to expand or create new programs should be inclusive, balanced, and data-driven in order to achieve stated aims and avoid significant disruption.

**How have you influenced, or are you attempting to influence their position?**
As a member of TechNet, eBay regularly participates in policy discussions among members and association leadership. eBay also works with association leaders to help develop TechNet's advocacy strategy.

(C12.3e) Provide details of the other engagement activities that you undertake.

eBay is a member and serves on the steering committee of Business for Innovative Climate and Energy Policy (BICEP), which is an advocacy coalition of businesses with the overall goal of supporting, “broad, bi-partisan consensus among policy makers to reduce US greenhouse gas emissions 80 percent below 1990 levels by 2050, with an interim goal of at least 25 percent below 1990 levels by 2020.” Via our leadership role in BICEP, we regularly support state and federal legislation and global policy that reinforces BICEP’s position on climate change. As a BICEP member, eBay has signed on to the Climate Declaration, a call to action from leading American businesses and individuals urging policymakers and business leaders to seize the economic opportunity in tackling climate change. In 2015, eBay joined dozens of companies and organizations in the Business Backs a Low Carbon USA initiative, which calls on the US government to support strong action on climate change both nationally and abroad, including the Paris Climate Accord.” Most recently via BICEP, eBay reaffirmed corporate commitment to reducing carbon emissions by signing on to the “We Are Still In” initiative, which is a collection of over 1,200 policymakers, businesses, investors, and higher education institutions that support the Paris Climate Agreement. eBay Inc. is a founding member of the Future of Internet Power, a working group convened via Business for Social Responsibility (BSR). This group is comprised of leading technology companies that will share and promote best practices and develop a platform for driving low-carbon, sustainable power for data centers in collaboration with select utilities and policymakers. eBay Inc. is also a member of the Silicon Valley Leadership Group. The Leadership Group is a key player in helping ensure the implementation of California’s AB 32 rewards efficiency, protects innovation and provides flexibility to seek out and implement the lowest-cost solutions, while also meeting our greenhouse gas reduction goals. In addition, the Leadership Group is increasingly active in federal-level advocacy for smart energy and climate policies. eBay is a member of the Renewable Energy Buyers Alliance and a signatory of the Corporate Renewable Energy Buyers Principles. Companies across the US want to power their operations with clean and renewable energy but navigating the path to renewables is harder than it should be. REBA exists to make the transition easier by helping companies understand the benefits of moving to renewables, connecting corporate demand to renewable energy supply, and helping utilities better understand and serve the needs of corporations. eBay was a founding member of the Business Renewables Center that is now part of the fully-formed REBA.

(C12.3f) What processes do you have in place to ensure that all of your direct and indirect activities that influence policy are consistent with your overall climate change strategy?

To ensure a coordinated approach to and positions on climate and energy policy activities, regular meetings are held regularly between Impact and Government Relations staff, and on an ad hoc basis with other internal stakeholders from Global Communications, Finance and operations. Agendas for these meetings include business impacts, pending policy initiatives and discussion of how these do or do not align with our corporate climate and energy strategy, as well as identify any opportunities/requests to engage with external stakeholders on these activities.
