eBay Inc. - Climate Change 2022

C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

eBay Inc. (NASDAQ: EBAY) is a global commerce leader through our Marketplace platforms which connect millions of buyers and sellers in more than 190 markets around the world, empowering people and creating opportunity for all. The platforms include our online marketplace located at www.ebay.com and its localized counterparts, including off-platform businesses, as well as eBay’s suite of mobile apps.

Founded in 1995 in San Jose, California, eBay is one of the world’s largest and most vibrant marketplaces for discovering great value and unique selection. Our technologies and services are designed to provide buyers choice and a breadth of relevant inventory from around the globe and to enable sellers worldwide to organize and offer their inventory for sale, virtually anytime and anywhere. In 2021, eBay enabled $87 billion of gross merchandise volume.

eBay’s purpose is to empower people and create economic opportunity for all through our technology for our global community of users. Every day, people build businesses on our platforms. With low cost of entry for sellers, we offer a highly accessible way for all types of users to interact in a global marketplace that’s inclusive and connects people of all backgrounds.

Accordingly, we prioritize our corporate responsibility efforts to impact the areas of economic empowerment and sustainable commerce. We are also committed to reducing the environmental impact of our platform by increasing efficiency, expanding our use of cleaner energy, and using our global marketplace to extend the life of goods in a circular economy. For example, eBay continues its work to reach its goal of 100% renewable energy by 2025 and is a member of the U.S. EPA’s Green Power Program. Additionally, we strive to integrate best practices in our offices and data center operations and to continually reduce our environmental footprint. In 2021, eBay expanded these practices to include power and thermal environmental management in our remote office server rooms — decreasing the amount of energy consumption by increasing the temperature set points in the rooms. eBay invested in Smart Power Distribution units (PDU’s) globally to actively monitor power and thermal usage and continue to look at ways to promote greener server rooms.

Throughout 2021, we made strides to implement energy-efficient practices at our eBay offices and data centers, resulting in a significant decrease in our total Scope 1 and 2 emissions (or those coming directly from a company’s operations). For the remaining Scope 1 and 2 emissions, we have purchased carbon offsets to achieve carbon neutrality as a company.

C0.2

(C0.2) State the start and end date of the year for which you are reporting data.

<tbody>
<tr>
<td>Board-level committee</td>
<td>The Board of Directors' Corporate Governance and Nominating Committee (&quot;CGN&quot;) has the ultimate responsibility for sustainability and Environmental, Social and Governance (ESG) issues, including overseeing the company's policies and programs concerning sustainability reporting. We have chosen to engage around climate and other ESG issues at the board level, because our Board members have expressed interest in monitoring the company's corporate social responsibility (CSR) work. Engagement at the Board level also ensures that climate and related ESG issues are prioritized by eBay's leadership team. The CGN reviews climate-related progress including emissions reduction as part of the annual Impact Report and review of renewable energy progress. ESG and sustainability updates are also provided to the CGN or full Board at least quarterly. The CGN as a whole is responsible for providing feedback and guidance on our climate targets, progress, and focus. For example, in 2020, eBay's proposal to participate in the Science-based Targets Initiative (SBTi) was reviewed and supported by the CGN. As such, eBay aligned its emissions target with SBTi criteria. Additionally, the full Board has ultimate responsibility for risk oversight. The Board also reviews the outcomes of stockholder ESG engagement with management and considers proactive changes based on feedback.</td>
</tr>
</tbody>
</table>

C1.1b

(C1.1b) Provide further details on the board’s oversight of climate-related issues.

C1.2a

(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored (do not include the names of individuals).

ORGANIZATIONAL STRUCTURE: Guided by the eBay Impact Team, with oversight from eBay’s Board of Directors and Executive Leadership Team, our approach to ESG matters is integrated into the core of our business. eBay’s Chief Sustainability Officer (CSO) leads eBay’s Impact Team, which works across the company to help our business groups and functions prioritize ESG as part of the company’s overall strategy, including goal setting, impact measurement, and reporting.

Our CSO chairs eBay’s ESG Council which is composed of and engages with critical partners across functions in our Company. The ESG Council is sponsored by eBay’s Chief Executive Officer (CEO) and reports up to eBay’s Executive Leadership Team. eBay’s CEO has overall oversight of the company’s ESG and climate-related strategy through the ESG Council.

Members of eBay’s Executive Leadership Team sponsor eBay’s Impact Goals (including our renewable electricity and carbon reduction targets) to ensure we prioritize and remain accountable to achieving these targets at the highest levels of our business. For example, eBay’s Chief Financial Officer (CFO) is the sponsor for the company’s renewable energy commitment. Additionally, eBay’s Executive Leadership Team reports directly to the Board of Directors through the Corporate Governance and Nominating Committee on climate-related issues.

ASSOCIATED RESPONSIBILITIES: eBay’s CFO reports directly to our CEO and is responsible for overseeing plans that support our renewable energy commitment and target. Through the management of eBay’s renewable energy commitment and target, he supports the assessment and management of eBay’s climate-related risks and opportunities and helps to advance the company’s sustainability goals.

Our CSO’s responsibilities include: (1) monitoring the company’s carbon footprint and determining the activities that have the most significant contribution to the footprint; (2) developing strategies to reduce the company’s carbon footprint, including creating a comprehensive renewable energy strategy for eBay’s facilities in regions where our operational footprint is most significant, specifically at eBay’s major data center locations in Utah and Nevada; (3) assessing climate change-related risks for the company, such as potential impacts to buildings, data center locations; and (4) achieving progress towards eBay’s climate change-related corporate goals, such as eBay’s commitment to achieve 100% renewable energy in our electricity supply at eBay-controlled data centers and offices by 2025 and decreasing absolute Scope 1 and 2 greenhouse gas (GHG) emissions by 90% and absolute Scope 3 downstream transportation and distribution emissions by 20% between 2019 and 2030.

eBay’s cross functional ESG Council is responsible for helping to advance our climate and related ESG strategies in addition to supporting the ongoing management of specific ESG risks and opportunities across our business. As such, eBay’s ESG Council engages with numerous critical partners across the company.

eBay’s ESG Council includes senior leaders from the numerous functions across eBay: including Risk Management, Finance, Investor Relations, Compliance, Corporate Secretary, Brand, Customer Experience, Data Center Engineering, Seller Engagement, Delivery and Product Marketing. Examples of ESG Council member responsibilities are as follows: (1) eBay’s Compliance and Corporate Secretary functions supports the identification of climate-related legislation that may impact our company. (2) eBay’s Brand and Customer Experience functions support engagement with our buyers and sellers on ESG topics. (3) Our Data Center Engineering function supports the management of renewable energy strategy and target at our facilities. (4) Our Delivery function supports our strategies to reduce environmental impacts of shipping. (5) eBay’s Product Marketing function supports the promotion of our recommerce strategy, including the buying and selling of pre-owned goods.

MONITORING OF CLIMATE-RELATED ISSUES: eBay’s ESG Council typically convenes at least twice a year to review eBay’s ESG strategy, performance, and targets, including discussing the company’s climate-related issues and data; and working groups focused on specific sustainability issues such as recommerce and carbon offsets meet almost monthly. The ESG Council also provides written updates. This Council reports up to the Executive Leadership team (which includes our CEO and CFO) to further support the ongoing monitoring of climate-related issues, risks, and opportunities, including progress towards the company’s climate-related targets.
Do you provide incentives for the management of climate-related issues, including the attainment of targets?

C2.1b

How does your organization define substantive financial or strategic impact on your business?

DEFINITION OF SUBSTANTIVE FINANCIAL OR STRATEGIC IMPACT: eBay defines a substantive financial impact to our business as lower revenue growth, decreased revenue, increased expenses or reduction to operating income or earnings, corresponding to progressively higher risk.

DESCRIPTION OF THE QUANTIFIABLE INDICATOR(S) USED TO DEFINE SUBSTANTIVE FINANCIAL OR STRATEGIC IMPACT: The financial guidance issued by eBay was 1% to 3% revenue growth, but with increased margins and cashflow. Any impacts that would cause eBay's growth to be at or below the low end of guidance (i.e., approximately less than $100 million of growth), would be considered significant to a shareholder, potential shareholder or customer.
(C.2.2) Describe your process(es) for identifying, assessing and responding to climate-related risks and opportunities.

**Time horizon(s) covered**

- Short-term
- Medium-term
- Long-term

**Description of process**

eBay's climate risk identification & assessment process is integrated into our company’s multidisciplinary company-wide risk-management process. This process covers short-, medium- and long-term time horizons, is used to determine which climate-related risks and opportunities could have a substantive financial or strategic impact and applies to all value chain stages. We also conduct periodic materiality assessments, which have continued to identify our GHG emissions and energy footprint as a top stakeholder concern. eBay's Chief Sustainability Officer (CSO) and other subject-matter experts from our Impact team actively engage with our company's key global functions, including Finance, Government Relations, Investor Relations, and Facilities teams, to evaluate climate risks and opportunities, interpret them into our business framework, and develop actionable recommendations. We evaluate climate-change risks and opportunities at the global level using a cross-functional governance model. This evaluation occurs annually, at a minimum, but at a higher frequency—at least every six months—in locations where our operational footprint is most significant, specifically our major data center and colocation data centers in Utah and Nevada. eBay's Government Relations team helps assess transitional risks due to current/emerging regulation, and the potential costs to the company of complying with such regulations. The team also employs consultants who review all pending regulations on the international, federal, and state/local levels regularly and flag any pertinent climate-related regulations. eBay’s Facilities and Information Technology teams assess physical risks, that may impact our direct operations, including extreme weather events to eBay's facilities and data centers, and the costs of operational interruptions and facility repairs. eBay’s Finance team assesses market risks, including the decreased demands for products due to weather events, and the potential cost of such decreases in demand. eBay's Investor Relations team uses expert consultants to assess investor-related risks such as ESG screening and questions by investors. We consider distinctions within eBay's business model in comparison to traditional retailers. Most notably, eBay does not maintain our own inventory for goods sold on our platform. This distinction impacts how our company may approach operational risks. The Investor Relations team also consults external subject matter experts to identify opportunities as well as social, policy, and/or environmental issues that could materially impact our business. As risks and opportunities are identified, the appropriate teams evaluate and implement response measures. Short-term risks are prioritized, but long-term risks (6 years or longer) are also considered as part of this process. eBay's Impact team consults external subject matter experts including the Clean Energy Buyers Alliance (CEBA), World Wildlife Fund (WWF), and 3rd party consultants to identify risks and opportunities as well as ESG issues that could materially impact our business. As risks are identified by our operations teams (e.g., Data Center, Compliance, Facilities and Delivery) and the appropriate teams evaluate and implement response measures. The Impact team engages with the operations teams at least quarterly to assess potential risks and opportunities as they arise. To assess climate-related risks at eBay's physical locations, the Impact team also assesses our company's owned and leased property-specific climate, water and biodiversity risks. eBay has also included a climate risk management process as part of our Annual 10-K risk disclosure. eBay actively implements processes to manage transition risks and takes measures to increase the resiliency of our company’s locations and mitigate physical risks. CASE STUDY/EXAMPLE OF HOW PROCESS IS APPLIED:

**Situation:** eBay's physical risks related to climate change are considered to be long-term risks. To manage these physical risks, eBay has implemented procedures and other measures to increase the resiliency of our facilities, and to our business as a whole. In particular, increased extreme weather events have impacted eBay’s sellers (which included 17 million active sellers as of year-end 2021) to deliver shipments on time, which in turn has also impacted our business. For example, in 2021, due to severe weather conditions from Tropical Storm Nicholas in 2021, parts of the US southeast region experienced shipping delays. Task: In order to ensure items sold on eBay are delivered on time and not delayed due to extreme weather events, eBay needed to establish processes, procedures, and policies to support our sellers. Action: eBay's Shipping and Delivery team established a task force to plan responses to the increased frequency of extreme weather events and eBay's Emergency Communications Playbook was created to protect sellers from late shipments as a result of extreme weather events. For example, during Tropical Storm Nicholas in 2021, eBay automatically protected seller performance from late shipping rates, defects from cancelled transactions and other seller performance criteria. Additionally, eBay continues to enhance seller tools to support shipping needs, including collaborations with shipping carriers. Result: By protecting our sellers through our procedures and collaborations, we have saved our sellers time and money, which has a direct correlation to increasing our company's gross merchandising volume. - Transitional Risks and/or Opportunities Situation: The increased cost of energy, water and related raw materials can directly impact operating costs at eBay's physical locations. Operationally, energy is an essential input to eBay business. Task: To meet the needs of our business and stakeholders, the Impact team partnered with Finance and Operations to assess the feasibility of entering into a virtual power purchase agreement (VPPA) while simultaneously working with the Global Communications team to assess reputation and other risks and opportunities presented by taking this step in making progress toward the goal. Action: To continue executing on our 100% renewable electricity goal, eBay continues to invest in renewable energy projects, prioritizing virtual purchase power agreements (VPPAs), which ensures that more green electricity is fed into our electricity grids. We've entered into VPPAs for a solar project in Louisiana and a wind project in Texas while we continue to look for additional opportunities globally. Result: While it is likely that short term energy costs could rise as we implement renewable contracts, these are expected to be very modest and far surpassed by the reputation uplift (and risk avoidance) of committing to a low-carbon energy supply within the next 5 years (by 2025).
(C2.2a) Which risk types are considered in your organization’s climate-related risk assessments?

<table>
<thead>
<tr>
<th>Relevance &amp; inclusion</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current regulation</td>
<td>eBay’s impact team consults with our Government Relations team to identify any current or future regulation risks, related to issues including carbon pricing, clean energy, the circular economy, and transportation. Currently, the Government Relations team is not aware of any substantive risk from current regulations, however, we do consider the impact from potential future regulations to be relevant enough to continuously monitor. For example, due to our online presence in France, we have been monitoring the Anti-Waste Law (Laws No. 2020-105 and 2020-269, relating to a Circular Economy and the Fight Against Waste) that was adopted in early 2020. In 2022, this law has expanded making it illegal to destroy unsold electronics, textiles, books, and other products. This regulation is not anticipated to present direct risks in terms of reduced revenues or increased expenditures at eBay. In fact, this law may present revenue opportunities for eBay, because we play a role in the circular economy and support the reselling of unsold or returned items. Through this law, we will continue supporting our sellers, including communicating the environmental benefits of buying and selling pre-owned goods on our platform. We continue to monitor regulatory frameworks globally to assess if eBay is impacted by proposed or future regulations.</td>
</tr>
<tr>
<td>Emerging regulation</td>
<td>The potential for fuel and energy taxes and regulations exposes eBay to risk both in terms of increased costs and decreased revenue. Operationally, energy is an essential input to eBay’s business. Our platform relies on a data center portfolio that is responsible for 83% of our total energy consumption. Our customer support organization operates facilities 24 hours a day, 7 days per week, and our global staff count on being able to travel between offices and across geographies (during non-pandemic times). Consequently, energy taxes and regulations could raise energy prices, leading to increased costs to the company. With support from Government Relations, we also advocate for clean energy policy, including clean and low carbon strategies at the federal level as well as in states where we have a significant operational footprint, including California and Utah. We also continue to implement energy-saving strategies in the operations of all of our facilities, to mitigate this risk.</td>
</tr>
<tr>
<td>Technology</td>
<td>As an e-commerce company, eBay is a recipient and user of energy products and services. eBay regularly assesses the efficiency of our data center infrastructure as well as the seamless operation of our online consumer platform through our Core Technology team. eBay faces risks of not capitalizing on technological improvements / innovations that support the transition to a low-carbon, energy efficient economy that could result in higher costs of operation or downtime of our online platform. Additionally, if eBay does not power its Utah data centers with renewable energy, while other e-commerce companies transition their data centers electricity to renewables, eBay faces reputational risks compared to its competitors.</td>
</tr>
<tr>
<td>Legal</td>
<td>This is a lower-likelihood risk for eBay. The company monitors all litigation as part of our Global Compliance and Legal Counsel teams’ active review of correspondence, including any potential climate-related litigation, and will alert the impact team if any potential or actual cases come to the Legal department’s attention. eBay could be indirectly exposed to litigation that results in extra costs for electricity providers could also affect eBay indirectly, if those energy providers decided to pass on the costs to their customers. These instances have not occurred, but they pose a potential, albeit unlikely, risk to the company.</td>
</tr>
<tr>
<td>Market</td>
<td>The potential of market risks exposes eBay and the company’s risk both in terms of increased costs and decreased revenue. Our business model relies heavily on shipping and logistics, a small part of which is done directly by eBay Inc. businesses, but the majority of which occurs downstream of and out of our direct control. Increasing energy prices could quickly translate into higher shipping and logistics costs. These risks are monitored by our Delivery and Logistics teams and as part of their ongoing cost review and projections. The impact team interacts with this team on a regular basis to assess if any risks have been identified specific to transportation and logistics and incorporates this information into our overall risk assessment. This risk (including those associated with cross-border trade) has also been identified by our ERM function and is noted in our annual 10-K filing. If such costs passed on in the prices offered to customers on our commerce sites, this could drive down demand for online shopping, causing overall harm to eBay’s business.</td>
</tr>
<tr>
<td>Reputation</td>
<td>In a low-carbon economy, eBay’s stakeholders may become more concerned about climate-related impacts, and there may be a cost for the emissions associated with eBay’s business model, including an impact on eBay’s reputation, eBay’s Impact team and ESG Council help to monitor these potential risks, which can negatively impact our company’s financial performance. For example, eBay examines reputational risks among our investors, employees, buyers and sellers, and the media. We consider this type of reputational risk to be well managed through our current ESG strategy, which includes a renewable electricity target and Science-Based Target goal to reduce Scope 1 and 2 emissions by 90% by 2030, and Scope 3 downstream transportation and delivery emissions by 20% in the same timeframe.</td>
</tr>
<tr>
<td>Acute physical</td>
<td>Hurricanes, floods, and wildfires could negatively impact shipping and customer demand. For example, Hurricane Ida was the second-most damaging and intense hurricane to make landfall in Louisiana in 2021. Impacts from the storm resulted in shipment delays from eBay sellers located in the southeast due to shipping network disruptions. India and South Asia also suffered from several severe weather events, including flooding and cyclones, impacting more than 57 million people according to the International Federation of Red Cross and Red Crescent Societies. Wildfires could also negatively impact eBay’s operations and our employees, as the company is headquartered in California. Additionally, water shortages can impact our operations, specifically at our more water-intensive data centers. These events commonly result in electricity and telecommunication network disruptions that can impact the ability of eBay customers, both sellers and buyers, to sell and make purchases online. The impact varies with the magnitude of the events and the concentrations of buyers, sellers, and shipping activities in the affected locations, but if the frequency and severity of weather events increases as climate change progresses, the risk will climb. Our Workplace Resources team actively monitors facility weather-related risk and Global Customer Service continually monitors online uptime and activity as part of our overall enterprise and climate risk assessment.</td>
</tr>
<tr>
<td>Chronic physical</td>
<td>eBay owns and leases various properties in the U.S. and 26 other countries/areas around the world. Some of these locations are more vulnerable than others to potential physical changes from climate change. For instance, in San Jose, CA, maps of potential sea level rise indicate that a 1-meter increase could submerge one of two major San Jose freeways and restrict access to the San Jose Airport, affecting the ability of employees and partners to travel to eBay’s headquarters in San Jose. Other risks could include disruption of our operations or physical damage to our facilities from floods, wildfires, or other extreme weather events and possible sea level rise. Drought and other climate-related decreases in the availability of fresh water could also pose a risk to our operations. This is most particularly the case for our data center operations. Water is essential for cooling, and prolonged shortages could ultimately result in service interruptions and costly relocation of data center services; therefore, our Data Center (Core Technology) team actively monitors and assesses the risk of water shortages as part of its operational risk assessment.</td>
</tr>
</tbody>
</table>

**Company-specific description**

The increased cost of energy, water, and related raw materials can directly increase our operating costs at eBay's physical locations, resulting in a decrease in our company’s net income. Additionally, increased operating costs at these locations can also impact the potential cost to offset our company’s carbon footprint. For example,
eBay’s 2021 energy spend was estimated to be approximately 0.5% of eBay’s total operating expenses (approximately $24 million). Operationally, energy is an essential input to eBay’s business. Our platform relies on a data center portfolio that is responsible for 83% of our energy consumption and more than 34,000 tons of CO2e emissions in 2021 (73% of our total Scope 1 and 2 emissions). Our customer support organization also operates facilities 24 hours a day, 7 days per week, and is crucial to supporting our buyers and sellers. Additionally, uncertainty in the price of energy and fuel could also impact the goods sold on our Marketplace. For example, the increased cost of transporting goods can directly impact eBay’s buyers and sellers, as shipping costs are either covered by the sellers and/or the buyers, potentially impacting eBay’s revenues. The emissions associated with our sellers’ delivery footprint also make up a majority of our company’s Scope 3 emissions (more than 86% of our Scope 3 emissions).

**Time horizon**

**Likelihood**
About as likely as not

**Magnitude of impact**
Low

**Are you able to provide a potential financial impact figure?**
Yes, a single figure estimate

**Potential financial impact figure (currency)**
136,000,000

**Potential financial impact figure – minimum (currency)**
<Not Applicable>

**Potential financial impact figure – maximum (currency)**
<Not Applicable>

**Explanation of financial impact figure**
The estimated financial impact is approximately $136 million, which assumes the potential for an approximate 1% decrease in eBay’s 2021 net income of $13.6 billion due to increased energy-related costs. It is estimated that between increased energy costs, along with uncertainty in the price of energy and fuel (which could also impact the goods sold on our Marketplace) would result in a 1% reduction of our net income.

**Cost of response to risk**
600,000

**Description of response and explanation of cost calculation**
RESPONSE: eBay manages risks associated with energy and fuel costs through tracking and quantifying our environmental footprint and progress toward our emissions reduction targets; actively manage heating, ventilation, and air conditioning systems, lighting, and IT infrastructure; and reducing our reliance on traditional fuel sources. In coordination with the Impact team, eBay’s Facility team works to implement energy reduction initiatives. For example, data centers comprise 73% of our Scope 1 and 2 emissions. In 2021, to offset increases in electricity, we expanded energy efficiency initiatives to include power and thermal environmental management in our remote office server rooms — decreasing energy consumption by increasing the temperature set points in the rooms. eBay invested in Smart Power Distribution units globally to actively monitor power and thermal usage and continued to look at ways to promote greener server rooms. To date, our primary data centers in Salt Lake City, Utah, have also earned the ENERGY STAR® for Data Centers Label. These data centers have earned an ENERGY STAR® rating greater than 75, indicating they perform better than at least 75 percent of buildings nationwide. We engage with stakeholders, to evaluate opportunities to reduce our risks related to uncertainty in market signals. For example, in 2021, we were designated as an official member of the U.S. Environmental Protection Agency’s Green Power Partnership, a voluntary program to encourage organizations to use green power to reduce environmental impacts associated with conventional electricity. eBay was included in the partnership’s Top 30 Tech & Telecom list, which highlights the annual use of leading Green Power Partners in the tech industry. eBay also partners with advocacy organizations for climate change, such as the CEBA and Ceres Business for Innovative Climate and Energy Policy Network. COST CALCULATION: eBay’s 2021 energy spend was estimated to be approximately 0.5% of total operating expenses (approximately $24 million). Data centers were responsible for 83% of that consumption, with other facilities comprising the majority of the other energy consumption. Using a conservative assumption that regulations or taxes increase energy prices by 25%, that would increase energy spend by about $6 million annually. The relative percent of operating expenses would remain unchanged. Business travel is an insignificant contributor, in terms of total percent of spend for eBay.

**Company-specific description**
eBay’s brand and reputation are key drivers to the success of our business. Stakeholders, including our buyers and sellers are increasingly interested in our response to climate-related risks. Consumers worldwide recognize that recommerce can be a potential source of great income, with the added benefit of contributing to a healthier planet. For example, in 2021, we surveyed 4,469 of eBay’s consumer-to-consumer (C2C) sellers in the U.S., U.K., Canada, Germany, France, Italy and Australia around their habits of both buying and selling second-hand goods. As environmental concerns become ever more pressing, more sellers and buyers are citing sustainability and reduced waste as reasons for getting into the recommerce market. Approximately 34% of our buyer survey respondents around the world name sustainability as a reason for recommerce, as do 27% of sellers. In 2021, we also conducted a brand health study (BHCT), and asked consumers (buyers and sellers) to rate eBay and competitors on many brand attributes, including sustainability. Through this survey, we can identify any potential reputational risks associated with our company and sustainability. If it was identified that eBay was falling behind competitors on brand attributes related to climate or sustainability, this could result in a decrease in our net revenue transactions.

Explanation of financial impact figure
eBay conducts business in a strongly competitive environment that is under increasing scrutiny from stakeholders such as buyers and sellers around sustainability and climate. Increased positive brand recognition and sentiment could translate into positive competitive advantage increased net transaction revenues. For example, eBay’s 2021 net transaction revenues were approximately $9.7 billion. A 2% decrease net transaction revenues would amount to approximately $195 million in financial impacts.

Cost of response to risk
0

Description of response and explanation of cost calculation
To further mitigate risks related to increased stakeholder concern and negative feedback, we integrate environmental best practices across our global business to support a healthier planet for our community and generations to come. Through our marketplace, we encourage responsible consumption through the resale of items, helping to preserve the world’s finite resources by keeping materials in circulation longer. From 2021 to 2025, our goal is to avoid seven million metric tons of carbon emissions and avoid 230,000 metric tons of waste. In 2021 alone, we have conserved 1.5 million metric tons of carbon emissions and avoided 47,000 metric tons of waste through people selling their pre-owned and refurbished products on our marketplace. eBay has also had more growth in recommerce — or the selling and buying of pre-owned items — than in new products in 2021. Across our eBay offices and data centers, we also invest in clean energy and implement resource-efficient strategies to reduce our overall environmental footprint. Our efforts are aligned to our Science-Based Target goal to reduce Scope 1 and 2 emissions by 90% by 2030, and Scope 3 downstream transportation and delivery emissions by 20% in the same timeframe. We also aim achieve 100% renewable energy in our electricity supply at eBay-controlled data centers and offices. COST CALCULATION: Stakeholder engagement, transparency and related external activities are a normal part of our work, so we expect no additional costs ($0) to be incurred in communicating about our response to climate change or renewable energy achievements. Additionally, there is no additional costs incurred from people selling their pre-owned and refurbished goods on our marketplace.

Company-specific description
eBay is a global commerce leader and third-party marketplace. In 2021, eBay had 147 million active buyers, over 17 million sellers, and approximately 1.5 billion live listings globally. The buyers and sellers that use our marketplace may be affected by physical climate change risks, including the increased severity of extreme weather events such as cyclones, hurricanes, flooding, drought, and wildfires, as they may be unable to access eBay’s call centers and/or shipping and delivery of products could be delayed. This also presents a general risk to our business through decreased access to and traffic on our platform when electricity is not available or when people are displaced from their homes. Our users may spend less time on our websites and our applications for mobile devices as a result of a variety of climate change-related diversions caused by volatility in weather, including natural disasters; power shortages or outages from weather events; and other significant local, national or climate-related events. If any of these, or any other climate-related factors, divert our users from using our websites or mobile applications, our business could be materially adversely affected. For example, during Hurricane Ida shipments from eBay sellers located in the south were delayed due to shipping network disruptions. While the exact number of shipments and sellers in these areas are business sensitive and confidential, we estimate that 5-10% of shipments were delayed during the aftermaths of the hurricane (1-2 weeks). The U.S. is our number one market for sales, and any disruption to this market will have a material effect on our gross merchandise volume metrics. Additionally, India and South Asia (both growing markets for eBay) have recently suffered from several severe weather events, including flooding monsoons and prolonged heat waves and droughts. These events commonly result in electricity and telecommunication network disruptions that can impact the ability of eBay customers, both sellers and buyers, to sell and make purchases online.

**Opportunities**

- **Opportunity**
  - **Identifier**: Opp1
  - **Where in the value chain does the opportunity occur?**
    - Direct operations
  - **Opportunity type**: Energy source
  - **Primary climate-related opportunity driver**: Use of lower-emission sources of energy
  - **Primary potential financial impact**: Reduced indirect (operating) costs
  - **Company-specific description**
    - eBay prioritizes procurement of renewable energy at its data centers and offices, reducing exposure to GHG emissions and carbon and fuel costs. As a member of RE100, the global corporate renewable energy initiative bringing together hundreds of businesses committed to 100% renewable electricity, we are on track to meet eBay’s goal to attain 100% renewable energy in our electricity supply at eBay-controlled data centers and offices by 2025. In 2021, we achieved 90% renewable energy. Investors are also increasingly expecting companies to manage their climate risk and look for financial opportunity in a low-carbon market. eBay’s approach to climate change prioritizes the procurement of renewable energy, which will decrease the carbon footprint and stabilize operating costs of our business. For example, our headquarters is in San Jose, California where the grid is primarily powered by natural gas in a pseudo deregulated market with only single-option utilities that control pricing. Our only owned data center is in Salt Lake City, Utah, a fully regulated market. Even with constraints to easily access renewable energy at a reasonable cost, eBay recognized the importance of achieving 100% renewable energy in our offices and data centers and has committed to RE100 by 2025. From 2020 to 2021, we increased our MWhs of renewable energy supply by 9%, and we have achieved 90% renewable energy for all of our data centers and offices. In our San Jose headquarters, our largest office, we use 100% renewable energy, provided by San Jose Clean Energy. This office now uses exclusively wind, solar and geothermal power, and we look to expand this to more offices in the future. In addition, consumers are increasingly aligning their personal values with buying behaviors and are looking for shopping destinations that support their choices and beliefs. eBay can be an appealing brand for consumers who value sustainability and climate action, which can lead to increased demand for eBay’s products, and therefore stock prices. For example, in 2021, we surveyed 4,469 of eBay’s consumer-to-consumer (C2C) sellers in around their habits of both buying and selling second-hand goods. As environmental concerns become ever more pressing, more sellers and buyers are citing sustainability and reduced waste as reasons for getting into the recommerce market. Approximately 34% of our buyer survey respondents around the world name sustainability as a reason for recommerce, as do 27% of sellers.

- **Time horizon**: Medium-term

**Are you able to provide a potential financial impact figure?**
Yes, a single figure estimate

**Explanation of financial impact figure**
While the exact amount is difficult to determine due to a combination of factors impacting sales in each of these regions at the time of the weather event, external data indicate that retail spending decreases during the weeks directly impacted by severe weather events. Diversion of users away from using our platforms could adversely affect our business results. For instance, using 2021 net revenue of $10.4 billion for the eBay Marketplace, a prolonged 10% decrease in shopping on our platform could mean as much as a 2% decrease in overall net revenue (approximately $200 million).

**Cost of response to risk**
0

**Description of response and explanation of cost calculation**
RESPONSE: To respond to increased severity of extreme weather events, eBay has implemented the following risk management processes. eBay’s delivery and shipping teams have established a task force to plan responses to the increased frequency of extreme weather events. For example, we provide seller protection for shipping delays due to weather. eBay has also developed an Emergency Communications Playbook that protects sellers from late shipments as a result of extreme weather events, including wildfires and hurricanes. Additionally, the diversification of eBay’s business provides customers with options that could help mitigate lower demand for online shopping by offering new and augmented shopping experiences. For example, we expanded our intermediate selling services to increase customer convenience, such as eBay Authenticate and Buy Online/Pickup in Store with select sellers. Offering alternatives to at-door delivery can alleviate some of the shipping challenges that result from severe weather events. eBay Guaranteed Delivery makes it easy for our sellers to offer fast, accurate, and reliable delivery times, while buyers can narrow their search results based on how quickly they want an item delivered. COST CALCULATION: Managing changing consumer behavior is inherent in eBay’s business model, so no additional management costs ($0) are anticipated at this time.

**Comment**
eBay does business in a strongly competitive environment that is under increasing scrutiny from as investors. Increased positive brand recognition and sentiment could translate into positive competitive advantage and increased stock price. For example, as of June 2022, eBay’s Market capitalization was $24.8 billion. If eBay experiences positive brand recognition, we expect and estimated 0.5% increase in the market cap, which would amount to $124 million.

**Potential financial impact figure**

$124,000,000

**Strategy to realize opportunity and explanation of cost calculation**

STRAtegy: eBay’s strategy to realize this opportunity includes our 2025 environmental targets. As a member of RE100, we have set an ambitious 2025 goal to attain 100% renewable energy in our electricity supply at eBay-controlled data centers and offices. From 2020 to 2021, we increased our MWhs of renewable energy supply by 10%, and thus far, we have achieved 90% renewable energy for all of our data centers and offices. In our San Jose headquarters, our largest office, we use 100% renewable energy, provided by San Jose Clean Energy. This office now uses exclusively wind, solar and geothermal power, and we look to expand renewables to more offices in the future. Our strategy to realize this opportunity also includes a step-wise plan to incrementally get to 100% renewable over the next two and a half years. This plan is regularly reviewed and re-assessed for feasibility and advancements in the market. In addition to this goal, we recognize the need to promote our progress to attract and retain customers. eBay continues to encourage adoption of low-carbon and electric transportation with our primary logistics partners, including USPS, UPS, and FedEx (which are not considered our direct suppliers in this context, but partners within our value chain). We also continue to provide guidance to protect sellers that could be impacted from hurricanes and wildfires, and clearly communicate eBay’s expectations of sellers and their delivery of goods. COST CALCULATION: Stakeholder engagement, transparency and related external activities are a normal part of our work, so we expect no additional costs to be incurred in communicating about our response to climate change or renewable energy achievements. However, we have staff dedicated to our renewable energy strategy. This staff management cost equates to about a one-half full-time employee, or $100,000.

**Explanation of financial impact figure**

Changes in shopping behavior toward more online shopping for pre-owned goods, could increase eBay revenue. For example, using 2021 net transaction revenue of $9.7 billion, and accounting for the portion of pre-owned goods sold on our platform, an approximate 2% increase in online shopping would translate to approximately $195 million in additional revenue from pre-owned goods alone.
Comment to about one-half of a full-time employee, which is approximately $100,000.

To track progress towards these goals, we implemented an internal dashboard that automates these calculations and pulls data directly from our gross marginal volume sales. Two staff worked part time over three months to realize this improvement. $50,000 represents the salaries from the time dedicated to this project.

**Cost to realize opportunity**

50000

**Strategy to realize opportunity and explanation of cost calculation**

**STRAtegy:** Our ability to extend the life cycle of products is central to our brand promise. The concept of circular commerce has been part of our brand since the very beginning, including the sale of our first pre-owned item, a broken laser pointer. Circular commerce is also an important part of our forward-looking brand strategy. As such, we are actively pursuing new ways to advance circular commerce by using innovative technologies. For example, in the past year alone, we have conserved 1.5 metric tons of carbon emissions through people purchasing pre-owned and refurbished goods on our marketplace. Additionally, the purchase of pre-owned and refurbished goods provides rewards for the entire product lifecycle – starting with the saved resources and production costs of water, energy and carbon emissions to make the goods, and ending with realized new lives for items, thus preventing them from being sent directly to landfills. Additionally, at least 20% of goods sold on eBay are used or pre-owned, making up a significant portion of our revenue and gross merchandise volume. To realize this opportunity, we also set company-wide goals around circular commerce. From 2021 to 2025, we aim to create $20 billion in positive economic impacts and avoid 7 million metric tons of carbon emissions through people purchasing pre-owned and refurbished goods on our marketplace. **COST CALCULATION:** eBay tracks the avoided carbon emissions from resold products each year as part of our Impact goals. To track progress towards these goals, we implemented an internal dashboard that automates these calculations and pulls data directly from our gross marginal volume sales. Two staff worked part time over three months to realize this improvement. $50,000 represents the salaries from the time dedicated to this project.

Downstream

**Opportunity type**

Resilience

**Primary climate-related opportunity driver**

Participation in renewable energy programs and adoption of energy-efficiency measures

**Primary potential financial impact**

Increased revenues resulting from increased demand for products and services

**Company-specific description**

In response to the Paris climate agreement, the global regulatory landscape for renewable energy may shift over the next decade. Incentives at the local, state and federal levels can reduce the costs and increase the returns from eBay's investments in renewable energy and energy efficiency. In line with other technology and ecommerce companies, energy use typically represents the largest direct environmental impact from our business. For example, as our marketplace business grew in 2021, data center electricity consumption increased by approximately 4%. Additionally, our platform relies on a data center portfolio that is responsible for 93% of our total energy consumption and 73% of Scope 1 and 2 emissions in 2021. This presents an opportunity to invest in efficiency measures, as well as renewable energy procurement. Additional reputational benefits related to the participation in renewable energy programs and adoption of energy-efficiency measures may also be realized. This includes mitigating climate-related risks, including those related to extreme weather events.

**Explanation of financial impact figure**

The estimated financial impact of $136 million assumes the potential for an approximate 1% increase in eBay's 2021 net income of $13.6 billion should margins, revenues, and cost of capital be positively impacted by returns on company investments in renewable energy and energy efficiency.

**Cost to realize opportunity**

100000

**Strategy to realize opportunity and explanation of cost calculation**

**STRAtegy:** eBay continuously evaluates opportunities and strives to implement energy-saving strategies in the operations of all of our facilities. We have previously set a goal to use exclusively renewable energy for our electricity needs in the data centers and offices which we control, and we remain on track for that. In 2021, we achieved 90% renewable energy, up from 81% in 2020 and 71% in 2019. eBay also tracks the avoided carbon emissions from resold products each year as part of our Impact goals. For example, we implemented an internal dashboard that automates these calculations and pulls data directly from our gross merchandise volume. Two staff worked part time over 3 months to realize this improvement. $50,000 represents the salaries from the time dedicated to this project. In 2021, eBay expanded energy efficiency practices to include power and thermal environmental management in our remote office server rooms — decreasing the amount of energy consumption by increasing the temperature set points in the rooms. eBay invested in Smart Power Distribution units (PDUs) globally to actively monitor power and thermal usage and continues to look at ways to promote greener server rooms. Moreover, as part of our commitment to sustainability, we continue to implement energy-saving strategies in the operations of all of our facilities. To date, our primary data centers in Salt Lake City, Utah, have earned the ENERGY STAR® for Data Centers Label. In our San Jose headquarters, our largest office, we also use 100% renewable energy, provided by San Jose Clean Energy. This office now uses exclusively wind, solar and geothermal power, and we look to expand this to more offices in the future. **COST CALCULATION:** To execute on our renewable energy strategy, including achieving our target to source 100% of our electricity supply from renewable energy sources by 2025 for eBay-controlled data centers and offices, we have a dedicated staff member. This management cost equates to about one-half of a full-time employee, which is approximately $100,000.

<td>IDENTIFICATION OF SCENARIOS: To better understand and prioritize eBay’s potential climate-driven risks and opportunities, we evaluated two scenarios based on whether the world will mobilize in time to avert the disastrous climate impacts modelled by the scientific community. INPUTS, ASSUMPTIONS, AND ANALYTICAL CHOICES: The inputs used in our climate related scenarios were based on the Task Force on Climate-related Disclosure transition scenario risks categories. A low-carbon economy, stakeholders may become more concerned about climate-related impacts, which could impact access to and cost of capital. In this assessment, we also considered market shaping forces. For example, changing demographics and social shifts—including the rise of Gen Z—have resulted in increased climate-related interest among stakeholders. For this scenario assessment, we also incorporated the lessons and observed trends from the current COVID-19 pandemic, as it has increased the importance of e-commerce. The pandemic also provides parallels to how the world might be impacted and adapt to climate change. eBay is currently operating under the assumption that the low-carbon economy is the global trend, and we have developed a low-carbon transition plan to align with that approach. PARAMETER (BOUNDARY AND TIME HORIZONS): We consider our entire operational footprint, including Scope 3 emissions. We also consider the following time horizons in our scenario analysis: short-term (1-2 years), medium-term (3-5 years), and long-term (6-15 years), which are aligned with the horizons needs to assess and respond to the identified climate-related risks and opportunities. INFLUENCE ON STRATEGY AND FINANCIAL PLANNING: eBay evaluates risks and opportunities that may affect our services, value chain and operations. While eBay has exposure to both physical and transition drivers, transition drivers appear to present both the most meaningful risks and opportunities for eBay’s business, strategy and financial planning for the foreseeable future: eBay’s largest indirect environmental risks can be attributed to its downstream impacts, mainly customer related transportation of merchandise. Since eBay does not own inventory, directly handle shipping logistics and the company does not have a significant number of fulfillment centers, our physical risks are not prominent. This presents an opportunity for our company to continue on a path of resiliency, as we proactively manage climate-related risks.</td>
</tr>
<tr>

</table>

C3.2b

(C3.2b) Provide details of the focal questions your organization seeks to address by using climate-related scenario analysis, and summarize the results with respect to these questions.

**Row 1**

**Focal questions**

What is most likely going to have the largest impact on eBay’s climate performance? What threats to eBay’s infrastructure (data centers) could challenge the company over the next 10-20 years? How can R&D investments influence eBay’s future climate strategy? or are there other forces that may have a greater influence on eBay?

**Results of the climate-related scenario analysis with respect to the focal questions**

eBay’s climate-related scenario analysis has influenced both our operations and financial planning. Through our analysis, Scope 3 emissions related to eBay’s downstream shipping and transportation is likely going to have the largest impact on eBay’s climate related impact. For eBay, as an online marketplace, Scope 3 emissions are primarily derived from the shipping and transportation of items purchased online. As we work to reduce our transportation impact, we work with shipping carriers on the data collection process to track our overall impact. In 2021, we’ve increased our data quality in assessing the entire shipping process from our marketplace, including two of our larger international markets: the U.K. and Germany in addition to the U.S. To date, as part of our Science-Based Target, we have reduced our transportation footprint by 7%, from 4.4 million in 2019 to 4.1 million in 2021. We have also committed to further align our emissions reduction targets with the Science-Based Targets initiative criteria. We aim to reduce Scope 1 and 2 emissions by 90% by 2030, and Scope 3 downstream transportation and delivery emissions by 20% in the same timeframe. Over the next 10-20, physical climate-related risks have the potential to impact the company’s infrastructure, including data centers. eBay’s data centers consumed approximately 83% of the company’s energy usage and are critical to our business. As such, in 2021, eBay expanded energy efficiency initiatives at data centers to include power and thermal environmental management in our remote office server rooms — decreasing the amount of energy consumption by increasing the temperature set points in the rooms. eBay invested in Smart Power Distribution units (PDUs) globally to actively monitor power and thermal usage and continue to look at ways to promote greener server rooms. eBay’s investments into R&D, such as funding into customer experience, which includes shipping and logistics algorithms that match buyers and sellers that are closest to each other to reduce costs and climate-related impacts. For example, energy and fuel taxes or climate-related disruptions cause shipping and logistics expenses to rise, eBay may invest more funding into adapting its shipping networks and partnerships to keep costs manageable. Additionally, eBay’s Business Continuity and Technology (BCTR) planning approach focuses on the development of resource-loss based recovery strategies. It also establishes policies, processes, and procedures to enable advanced preparation and actions by business units. The business continuity program relies on the integration and coordination of efforts between BCTR, Disaster Recovery and Crisis/Emergency Management teams to respond to incidents, including extreme weather events. Through these investments, the company can better manage and mitigate climate-related risks.
(C3.3) Describe where and how climate-related risks and opportunities have influenced your strategy.

<table>
<thead>
<tr>
<th>Products and services</th>
<th>Description of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td><strong>INFLUENCE ON STRATEGY:</strong> Changing demographics and social shifts—including the rise of Gen Z—have resulted in increased climate-related interest and concern among investors, consumers and employees, which has also influenced our strategy and focus on recommerce. For example, from an eBay run survey, in Germany, 40% of sellers surveyed said that they sell pre-owned items because of its positive environmental impact. This increased from 39% in 2021. Additionally, a portion of sellers worldwide share this same sentiment: 15% in the U.S., and 16% in Canada. <strong>TIME HORIZON:</strong> The time horizon is 10+ years. <strong>CASE STUDY ON STRATEGIC DECISIONS INFLUENCED BY RISKS AND OPPORTUNITIES:</strong> In 2021 alone, we have conserved 1.5 million metric tons of carbon emissions through people selling their pre-owned products on eBay. We also set a new commitment that from 2021 to 2025, we will avoid 7 million metric tons of carbon emissions through people selling their pre-owned and refurbished products on eBay. We will continue to invest and measure our positive impact from the sale of pre-owned goods.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Supply chain and/or value chain</th>
<th>Description of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td><strong>INFLUENCE ON STRATEGY:</strong> eBay does not have a traditional supply chain; in that we do not manufacture or produce the goods that are sold on our platform. Therefore, a large portion of what we consider our value chain consists of the shipment of sold goods. Extreme weather events have had a small, but noticeable impact on the business due to delays in shipping and handling of products that eBay sellers sell on the platform, which is critical to our value chain. We continue to foster stronger relationships with carriers to help plan for potential disruption in delivery so that we can inform our users of any potential impacts. <strong>TIME HORIZON:</strong> We anticipate extreme weather events will have localized impact every year for the foreseeable future, therefore the time horizon to assess and adjust our delivery support for sellers is 10+ years. <strong>CASE STUDY ON STRATEGIC DECISIONS INFLUENCED BY RISKS AND OPPORTUNITIES:</strong> eBay’s business continues to be impacted by hurricanes, resulting in power outages and disrupted transportation routes. For example, the U.S. continues to be largely impacted by hurricanes and other disasters globally. A 1% revenue decrease during one week in a year could result in a loss of $2 million (2021 revenue of $10.4 billion divided by 52 weeks, multiplied by 1%). Internally, our delivery and shipping team has formed a task force to plan responses to extreme weather events because of their increased frequency. This team has relationships with our key carriers which are considered as partners in our value chain and critical to the shipping options we offer.</td>

<th>Investment in R&amp;D Evaluation in progress</th>
<th>Description of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>eBay evaluates risks that may affect our services, value chain and operations. While eBay has exposure to both physical and transition drivers, these risks have been evaluated. There may also be a reputational aspect, as stakeholder, including investors expect a low operational carbon footprint. Business disruptions as well as physical damage to facilities could increase costs and have potentially negative revenue impacts by restricting or disrupting alternative access to our platforms and services. We evaluate the energy management of our owned data center annually and have quarterly project plans for implementation of efficiency improvements. Due to the potential for climate-related disruptions (weather, electricity supply) data center teams include resiliency and redundancy plans as part of their ongoing management. <strong>TIME HORIZON:</strong> The time horizon is 10+ years as we do not anticipate climate-related weather events or impacts to electricity fuel mix decreasing. <strong>CASE STUDY ON STRATEGIC DECISIONS INFLUENCED BY RISKS AND OPPORTUNITIES:</strong> eBay has both owned and co-located (COLO) data centers in the U.S. that contribute approximately 83% of our total energy consumption. Over the last couple of years, eBay has been redistributing load among certain COLO data centers and our owned data centers to ensure we will stay up and running even in the event of climate-related damage or outage. We continuously evaluate the percentage of renewable energy supply to our facilities as part of our overall strategy for a sustainable long-term energy supply. In our San Jose headquarters, our largest office, we use 100 percent renewable energy, provided by San Jose Clean Energy. This office now uses exclusively wind, solar and geothermal power, and we look to expand this to more offices in the future. eBay consistently searches for opportunities for local, renewable energy solutions to power our offices and data centers. eBay also continues to invest in renewable energy projects, prioritizing virtual purchase power agreements (VPPAs), which ensure that more green electricity is fed into our electricity grid. So far, we’ve entered into VPPAs for a solar project in Louisiana and a wind project in Texas while we continue to look for additional opportunities globally.</td>

<table>
<thead>
<tr>
<th>Operations</th>
<th>Description of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td><strong>INFLUENCE ON STRATEGY:</strong> eBay’s business strategy, business and financial planning for the foreseeable future. eBay’s business model enables the reuse of goods as a leading platform to buy and sell pre-owned products; however, the company’s largest indirect environmental risks can be attributed to its downstream impacts, mainly customer-related transportation of merchandise. Since eBay does not own inventory, directly handle shipping logistics or have a significant number of fulfillment centers, our physical risks are not prominent. This presents an opportunity for our company to continue on a path of recommerce, as we proactively manage climate-related risks. eBay’s transaction volume and resulting revenue has previously been impacted by hurricanes in recent years. Because we expect that disruptive weather events will continue to occur, our financial planning includes contingencies for these potential dips in revenue. Our finance team works with the relevant marketplaces management to evaluate and plan for future events — in many cases the response from eBay, in terms of seller support will look the same across a market (the U.S.). However, regional differences and market volumes are taken into consideration when addressing each instance. For example, this impacted how we responded to support employees and sellers located near San Jose, California during the rolling blackouts in 2020. While eBay saw some impact within the areas that were affected, there are many dynamics driving our results and therefore opt to not quantify the impact of this particular event. However, using 2021 eBay revenue of $10.4 billion, even a 1% impact amounts to over $100 million, which is financially significant. We do not foresee climate-related extreme weather events to lessen in the foreseeable future, therefore the process of evaluating potential disruptions to our online sales and delivery is ongoing and 10+ years. The plans are reviewed annually and are adjusted as additional data on the frequency and severity of these events is collected from the events themselves.</td>

</table>
Please explain target coverage and identify any exclusions
In 2021, eBay joined the Science Based Targets initiative (SBTi) and set a science-based carbon reduction target. eBay commits to reduce absolute Scope 1 and 2 emissions by 90% by 2030 from a 2019 base year. This target covers 100% of our Scope 1 and 2 emissions. Our data coverage for these scopes include 100 percent of our operations in tracking our GHG emissions.

Plan for achieving target, and progress made to the end of the reporting year
In 2021, we’ve reduced our Scope 1 and 2 emissions by 26% from our 2019 baseline, making significant progress toward our goal. This is primarily due to the increase in our renewable energy supply. Throughout 2021, we made strides to implement energy-efficient practices at our eBay offices and data centers, resulting in a significant decrease in our total Scope 1 and 2 emissions (of those coming directly from a company’s operations). For the remaining Scope 1 and 2 emissions, we have purchased carbon offsets to achieve carbon neutrality as a company. eBay also continues to invest in renewable energy projects, prioritizing virtual purchase power agreements (VPPAs), which ensure that more green electricity is fed into our electricity grids. So far, we’ve entered into VPPAs for a solar project in Louisiana and a wind project in Texas while we continue to look for additional opportunities globally.

Is this a science-based target?
CDP
Yes, we consider this a science-based target, and the target is currently being reviewed by the Science Based Targets initiative.

**Target ambition**
1.5°C aligned

**Please explain target coverage and identify any exclusions**
In 2021, eBay joined the Science Based Targets initiative (SBTi) and set a science-based carbon reduction target. eBay commits to reduce absolute Scope 3 downstream transportation and delivery emissions by 20% by 2030 from a 2019 base year. In 2021, we’ve increased our data quality in assessing the entire shipping process from our marketplace, including two of our larger international markets: the U.K. and Germany in addition to the U.S.

**Plan for achieving target, and progress made to the end of the reporting year**
For eBay, as an online marketplace, Scope 3 emissions are primarily derived from the shipping and transportation of items purchased online. To date, as part of our Science-Based Target, we have reduced our transportation footprint by 7%, from 4.4 million in 2019 to 4.1 million in 2021. To reduce our transportation impact, we will continue to work with shipping carriers on the data collection process to track our overall impact.

**Is this target part of an emissions target?**
eBay’s 100% renewable electricity target directly supports our targets to achieve a 50% absolute reduction in Scope 1 and 2 Greenhouse Gas (GHG) emissions by 2025 and 75% reduction by 2030 from our 2016 baseline. (Emissions reduction target ID Abs1 and Abs2)

**Is this target part of an overarching initiative?**
RE100

**Please explain target coverage and identify any exclusions**
eBay’s 100% renewable electricity target was approved in 2016 as part our RE100 membership. The target coverage includes electricity consumption at offices and data centers under operational control.

**Plan for achieving target, and progress made to the end of the reporting year**
From 2019 to 2021, we have achieved 90% renewable energy for all of our data centers and offices. eBay continues to invest in renewable energy projects, prioritizing virtual purchase power agreements (VPPAs), which ensure that more green electricity is fed into our electricity grids. So far, we’ve entered into VPPAs for a solar project in Louisiana and a wind project in Texas while we continue to look for additional opportunities globally. In our San Jose headquarters, our largest office, we also use 100% renewable energy, provided by San Jose Clean Energy. This office now uses exclusively wind, solar and geothermal power, and we look to expand this to more offices in the future.

(C4.3c) What methods do you use to drive investment in emissions reduction activities?

<table>
<thead>
<tr>
<th>Method</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dedicated budget for other emissions reduction activities</td>
<td>To drive investment in emissions reduction activities, eBay has a dedicated budget to support these activities. For example, to support eBay’s 100% renewable electricity target, procurement (whether via on-site installations or off-site contracts) of lower-carbon energy is part of the company strategy. eBay continues to invest in renewable energy projects, prioritizing virtual purchase power agreements (VPPAs), which ensure that more green electricity is fed into our electricity grids. So far, we’ve entered into VPPAs for a solar project in Louisiana and a wind project in Texas while we continue to look for additional opportunities globally.</td>
</tr>
<tr>
<td>Employee engagement</td>
<td>Employee engagement is a key foundational element of eBay Inc.’s Impact strategy. The origins of our environmental programs can be traced directly back to the grassroots passion of our employees. Our Global Impact Teams continue this legacy. These Teams are briefed regularly on our energy and carbon approach, as well as educated about local initiatives that can impact our overall carbon footprint. Many of the extended team who work in operational energy efficiency, greener building, renewable energy and other areas are also Impact Team members.</td>
</tr>
<tr>
<td>Dedicated budget for energy efficiency</td>
<td>To drive investment in emissions reduction activities, eBay has a dedicated budget for energy efficiency projects. Across our eBay offices and data centers, we invest in and implement resource-efficient strategies such as tech refreshes at the data centers and LED lighting upgrades in offices to reduce our overall environmental footprint. In 2021, eBay expanded these practices to include power and thermal environmental management in our remote office server rooms — decreasing the amount of energy consumption by increasing the temperature set points in the rooms. eBay invested in Smart Power Distribution units (PDUs) globally to actively monitor power and thermal usage and continue to look at ways to promote greener server rooms.</td>

C5.3

(C5.3) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions.

C6. Emissions data

C6.1

(C6.1) What were your organization’s gross global Scope 1 emissions in metric tons CO2e?
Reporting year
Gross global Scope 1 emissions (metric tons CO2e)
5558
Start date
<Not Applicable>
End date
<Not Applicable>
Comment
eBay’s Scope 1 emissions are generated from fuel sources including natural gas consumption.

C6.2

(C6.2) Describe your organization’s approach to reporting Scope 2 emissions.
Row 1
Scope 2, location-based
We are reporting a Scope 2, location-based figure
Scope 2, market-based
We are reporting a Scope 2, market-based figure
Comment
To track performance against our 2025 and 2030 emissions reduction targets, we use our market-based Scope 2 emissions figure.
(C6.3) What were your organization's gross global Scope 2 emissions in metric tons CO2e?

Reporting year
Scope 2, location-based
118095
Scope 2, market-based (if applicable)
41757
Start date
<Not Applicable>
End date
<Not Applicable>
Comment
2021 Scope 2 market-based emissions are less than Scope 2 location-based emissions, because eBay increased our MWhs of renewable energy supply by 9%, achieving 90% renewable energy for all of our data centers and offices.

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?
Yes

(C6.4a) Provide details of the sources of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure.

Source
Sites determined to be de minimis

Relevance of Scope 1 emissions from this source
Emissions are not relevant

Relevance of location-based Scope 2 emissions from this source
Emissions are not relevant

Relevance of market-based Scope 2 emissions from this source (if applicable)
Emissions are not relevant

Explain why this source is excluded
De minimis sites consist of small service offices without full-time staff and for which eBay does not have access to complete and reliable information for the 2021 reporting period.

Estimated percentage of total Scope 1+2 emissions this excluded source represents
1

Explain how you estimated the percentage of emissions this excluded source represents
We estimated that these sites represent less than 1% of total emissions, due to the size of the sites, in addition to not having full-term staff.

Source
Fuel use by small vehicles/equipment

Relevance of Scope 1 emissions from this source
Emissions are not relevant

Relevance of location-based Scope 2 emissions from this source
Emissions are not relevant

Relevance of market-based Scope 2 emissions from this source (if applicable)
Emissions are not relevant

Explain why this source is excluded
It is likely that small amounts of diesel and gasoline consumption by campus and other support vehicles are not included in Scope 1 emissions estimates. eBay considers these emissions to be an insignificant contributor to the overall Scope 1 inventory total.

Estimated percentage of total Scope 1+2 emissions this excluded source represents
1

Explain how you estimated the percentage of emissions this excluded source represents
We estimated that these vehicles represent less than 1% of total emissions, due to limited number of support vehicles, in addition to the amount individuals that work from home.
(C6.5) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.

Purchased goods and services

Evaluation status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
235000

Emissions calculation methodology
Spend-based method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Please explain
Emissions were calculated using USEEIO's input-output life cycle assessment approach for 100% spend data for purchased goods and services over the reporting period. All values represent cradle-to-gate emissions across all GHG emissions identified in the GHG Protocol Value Chain Standard, using purchaser price.

Capital goods

Evaluation status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
39000

Emissions calculation methodology
Spend-based method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Please explain
Emissions were calculated using USEEIO's input-output life cycle assessment approach for 100% spend data for purchased goods and services over the reporting period. All values represent cradle-to-gate emissions across all GHG emissions identified in the GHG Protocol Value Chain Standard, using purchaser price.

Fuel-and-energy-related activities (not included in Scope 1 or 2)

Evaluation status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
53000

Emissions calculation methodology
Average data method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Please explain
Emissions were calculated using DEFRA's UK Government GHG Conversion Factors for Company Reporting. Emissions calculations represent the upstream emissions from the production and transportation of fuels consumed by eBay sites in the reporting year as well as emissions associated with the generation and transmission and distribution associated with electricity use.

Upstream transportation and distribution

Evaluation status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
21800

Emissions calculation methodology
Spend-based method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Please explain
Emissions were calculated using USEEIO's input-output life cycle assessment approach for 100% spend data for purchased goods and services over the reporting period. All values represent cradle-to-gate emissions across all GHG emissions identified in the GHG Protocol Value Chain Standard, using purchaser price.
Waste generated in operations

Emissions status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
4500

Emissions calculation methodology
Spend-based method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Please explain
Physical waste data for a bottom-up analysis were not available at the time of this analysis, and thus a spend analysis was required. Lack of granularity in utility spend made it very difficult to parse out spend on waste management. As such, the average percentage spend on waste management by the data processing and hosting industry was used to estimate eBay's total spend for these topics. This method is likely to overestimate actual emissions but given that this category represents a small proportion of our total footprint, this method was considered reasonable.

Business travel

Emissions status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
2176

Emissions calculation methodology
Hybrid method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
98

Please explain
Values represent all emissions associated with purchased air travel, rental cars and lodging. Emissions from air travel and rental cars were calculated using miles flown and driven in rental cars by eBay employees and emissions factors specific to air travel distance and average emissions per mile for rental cars. Emissions from lodging were calculated using USEEIO's input-output life cycle assessment and eBay's spend data on lodging.

Employee commuting

Emissions status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
20400

Emissions calculation methodology
Average data method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Please explain
Emissions were calculated using the total number of eBay employees and the Scope 3 Evaluator Tool developed by the GHG Protocol Partner, Quantis.

Upstream leased assets

Emissions status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
The emissions from eBay's leased assets (real estate) are accounted for under Scope 1 & 2 GHG emissions.

Downstream transportation and distribution

Emissions status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
4100000

Emissions calculation methodology
Distance-based method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
91

Please explain
Emissions were calculated based on carbon emissions reports provided by carriers based on our transaction (sold items on the platform) data. For transactions not associated with a particular carrier, we applied emissions factors based on mode of transportation. Our transactions and carrier data accounted for 91% of our downstream transportation volume in 2021. To estimate for the remaining 9%, we multiplied the total volume for other destinations (excludes US, UK and DE) by the average 2021 emissions intensity.
Processing of sold products

**Evaluation status**
Not relevant, explanation provided

**Emissions in reporting year (metric tons CO2e)**
<Not Applicable>

**Emissions calculation methodology**
<Not Applicable>

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
<Not Applicable>

**Please explain**
eBay does not produce goods for sale. Our “product” is our platform, whose emissions are accounted for under Scope 1 & 2 GHG emissions.

Use of sold products

**Evaluation status**
Relevant, calculated

**Emissions in reporting year (metric tons CO2e)**
276000

**Emissions calculation methodology**
Methodology for direct use phase emissions, please specify (Overall emissions are based on the sum of Transfer Energy and Device Use Energy.)

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
0

**Please explain**
Overall emissions are based on the sum of Transfer Energy and Device Use Energy. Transfer Energy was calculated by multiplying the estimated annual eBay data use by a Transfer Energy factor (kWh/GB) to get eBay's annual energy use. We then multiplied the energy use by the average US grid factor. Device Use Energy was calculated by multiplying the estimated annual eBay data use by a Device Use Energy factor (kWh/GB) to get eBay's annual energy use. We then multiplied the energy use by the average US grid factor.

End of life treatment of sold products

**Evaluation status**
Not relevant, explanation provided

**Emissions in reporting year (metric tons CO2e)**
<Not Applicable>

**Emissions calculation methodology**
<Not Applicable>

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
<Not Applicable>

**Please explain**
eBay does not manufacture products.

Downstream leased assets

**Evaluation status**
Not relevant, explanation provided

**Emissions in reporting year (metric tons CO2e)**
<Not Applicable>

**Emissions calculation methodology**
<Not Applicable>

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
<Not Applicable>

**Please explain**
eBay's downstream leased assets are minimal and therefore not relevant.

Franchises

**Evaluation status**
Not relevant, explanation provided

**Emissions in reporting year (metric tons CO2e)**
<Not Applicable>

**Emissions calculation methodology**
<Not Applicable>

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**
<Not Applicable>

**Please explain**
This category is not relevant to eBay as it does not operate franchises.
### Investments

**Evaluation status**  
Not relevant, explanation provided

**Emissions in reporting year (metric tons CO2e)**  
<Not Applicable>

**Emissions calculation methodology**  
<Not Applicable>

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**  
<Not Applicable>

**Please explain**  
This category is not relevant to eBay as it is neither an investor nor a financial intermediary.

### Other (upstream)

**Evaluation status**  
Not relevant, explanation provided

**Emissions in reporting year (metric tons CO2e)**  
<Not Applicable>

**Emissions calculation methodology**  
<Not Applicable>

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**  
<Not Applicable>

**Please explain**  
We have not identified any other upstream Scope 3 emission sources.

### Other (downstream)

**Evaluation status**  
Not relevant, explanation provided

**Emissions in reporting year (metric tons CO2e)**  
<Not Applicable>

**Emissions calculation methodology**  
<Not Applicable>

**Percentage of emissions calculated using data obtained from suppliers or value chain partners**  
<Not Applicable>

**Please explain**  
We have not identified any other downstream Scope 3 emission sources.

---

**C6.7**

(C6.7) Are carbon dioxide emissions from biogenic carbon relevant to your organization?  
No

---

**C6.10**
Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure
0.00000454

Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)
47315

Metric denominator
unit total revenue

Metric denominator: Unit total
10420000000

Scope 2 figure used
Market-based

% change from previous year
27.05

Direction of change
Decreased

Reason for change
eBay’s net revenues increased 17% to $10.42 billion in 2021 compared to 2020, primarily due to the migration of managed payments on a global basis and the associated higher take rate. From 2020 to 2021, eBay also increased our MWhs of renewable energy supply by 9% and have achieved 90% renewable energy for all of our data centers and offices. eBay’s decrease in revenue intensity reflects the increase in renewable energy along with other emissions reduction activities.

Intensity figure
4.38

Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)
47315

Metric denominator
full time equivalent (FTE) employee

Metric denominator: Unit total
10800

Scope 2 figure used
Market-based

% change from previous year
9.39

Direction of change
Decreased

Reason for change
From 2020 to 2021, eBay increased our MWhs of renewable energy supply by 9% and have achieved 90% renewable energy for all of our data centers and offices. eBay’s decrease in FTE employee intensity reflects the increase in renewable energy along with other emissions reduction activities.

C7. Emissions breakdowns

C8.2h

(C8.2h) Provide details of your organization’s renewable electricity purchases in the reporting year by country

Country/area of renewable electricity consumption
United States of America

Sourcing method
Direct procurement from an offsite grid-connected generator e.g. Power Purchase Agreement (PPA)

Renewable electricity technology type
Wind

Renewable electricity consumed via selected sourcing method in the reporting year (MWh)
23917

Tracking instrument used
Contract

Total attribute instruments retained for consumption by your organization (MWh)
23917

Country/area of origin (generation) of the renewable electricity/attribute consumed
United States of America

Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering)
2021

Vintage of the renewable energy/attribute (i.e. year of generation)
2021

Brand, label, or certification of the renewable electricity purchase
Green-e

Comment
In 2019, we signed our first virtual purchase power agreement (VPPA) with other tech companies for the White Mesa Wind Project in Texas and began receiving renewable energy credits for this project.

Country/area of renewable electricity consumption
Czechia

Sourcing method
Green electricity products from an energy supplier (e.g. Green Tariffs)

Renewable electricity technology type
Renewable electricity mix, please specify (Solar, Wind, Water, Biomass)

Renewable electricity consumed via selected sourcing method in the reporting year (MWh)
12

Tracking instrument used
Contract
Total attribute instruments retained for consumption by your organization (MWh) 12

Country/area of origin (generation) of the renewable electricity/attribute consumed
Czechia

Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering) 2021

Vintage of the renewable energy/attribute (i.e. year of generation) 2021

Brand, label, or certification of the renewable electricity purchase
Other, please specify (Certificate from the vendor, EPH Group)

Comment
Certificate from the vendor, EPH Group; Mix of Renewables- Solar, Wind, Water, Biomass

Country/area of renewable electricity consumption
Germany

Sourcing method
Green electricity products from an energy supplier (e.g. Green Tariffs)

Renewable electricity technology type
Hydropower (capacity unknown)

Renewable electricity consumed via selected sourcing method in the reporting year (MWh) 2343

Tracking instrument used
Contract

Total attribute instruments retained for consumption by your organization (MWh) 2343

Country/area of origin (generation) of the renewable electricity/attribute consumed
Germany

Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering) 2021

Vintage of the renewable energy/attribute (i.e. year of generation) 2021

Brand, label, or certification of the renewable electricity purchase
Other, please specify (Certificate of renewable energy provided by service provider, E.on.)

Comment
Certificate of renewable energy provided by service provider, E.on.

Country/area of renewable electricity consumption
Ireland

Sourcing method
Green electricity products from an energy supplier (e.g. Green Tariffs)

Renewable electricity technology type
Wind

Renewable electricity consumed via selected sourcing method in the reporting year (MWh) 766

Tracking instrument used
Contract

Total attribute instruments retained for consumption by your organization (MWh) 766

Country/area of origin (generation) of the renewable electricity/attribute consumed
Ireland

Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering) 2021

Vintage of the renewable energy/attribute (i.e. year of generation) 2021

Brand, label, or certification of the renewable electricity purchase
Other, please specify (Certificate of renewable energy mix provided by service provider, Bord Gas.)

Comment
Certificate of renewable energy mix provided by service provider, Bord Gas.

Country/area of renewable electricity consumption
Italy

Sourcing method
Unbundled Energy Attribute Certificate (EAC) purchase
Renewable electricity technology type
Hydropower (capacity unknown)

Renewable electricity consumed via selected sourcing method in the reporting year (MWh)
62

Tracking instrument used
I-REC

Total attribute instruments retained for consumption by your organization (MWh)
62

Country/area of origin (generation) of the renewable electricity/attribute consumed
Italy

Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering)
2021

Vintage of the renewable energy/attribute (i.e. year of generation)
2020

Brand, label, or certification of the renewable electricity purchase
Other, please specify (Energia A2A Rinnovabile 100% during reporting period)

Comment
Energia A2A Rinnovabile 100% during reporting period

Country/area of renewable electricity consumption
Japan

Sourcing method
Unbundled Energy Attribute Certificate (EAC) purchase

Renewable electricity technology type
Renewable electricity mix, please specify (Solar, Wind)

Renewable electricity consumed via selected sourcing method in the reporting year (MWh)
22

Tracking instrument used
I-REC

Total attribute instruments retained for consumption by your organization (MWh)
22

Country/area of origin (generation) of the renewable electricity/attribute consumed
Japan

Commissioning year of the energy generation facility (e.g. date of first commercial operation or repowering)
2021

Vintage of the renewable energy/attribute (i.e. year of generation)
2020

Brand, label, or certification of the renewable electricity purchase
Other, please specify (ISO 14064-3: 2019 Limited Assurance of Equinix's energy consumption, renewable energy consumption, and Scope 1, 2, and 3 greenhouse gas emissions)

Comment
Solar/wind from Japan (10%) non-fossil certificates and China (90%) I-RECs. Equinix obtains ISO 14064-3: 2019 Limited Assurance of Equinix's energy consumption, renewable energy consumption, and Scope 1, 2, and 3 greenhouse gas emissions. The GPRs follow the same reporting principles and emissions factor data sets.

Country/area of renewable electricity consumption
Luxembourg

Sourcing method
Green electricity products from an energy supplier (e.g. Green Tariffs)

C8.2j

(C8.2j) Provide details of your organization’s renewable electricity generation by country in the reporting year.

C8.2k

(C8.2k) Describe how your organization’s renewable electricity sourcing strategy directly or indirectly contributes to bringing new capacity into the grid in the countries/areas in which you operate.

eBay continues to invest in renewable energy projects, prioritizing virtual purchase power agreements (VPPAs), which ensure that more green electricity is fed into our electricity grids. So far, we’ve entered into VPPAs for a solar project in Louisiana and a wind project in Texas while we continue to look for additional opportunities globally. These VPPAs directly contribute to bringing clean renewable energy onto the grid within the U.S.

In our San Jose headquarters, our largest office, we use 100% renewable energy, provided by San Jose Clean Energy. This office now uses exclusively wind, solar and geothermal power, and we look to expand this to more offices in the future.

eBay consistently searches for opportunities for local, renewable energy solutions to power our offices and data centers. This includes facilities in Europe, where some of our offices in Germany, Ireland and the UK are sourcing 100% of their electricity from green power sources as well.

C8.2l

(C8.2l) In the reporting year, has your organization faced any challenges to sourcing renewable electricity?

<table>
<thead>
<tr>
<th>Challenges to sourcing renewable electricity</th>

<tbody>
<tr>
<td>Energy usage</td>
<td>401652</td>
<td>MWh</td>
<td></td>
<td>4.1</td>
<td>Increased</td>
<td>In 2021, eBay’s energy consumption increased by 4.1% compared to 2021. In 2021, electricity use increased at our data centers as our marketplace business grew, though this was in part offset by energy efficiency initiatives across our properties. In addition, our intensity factor (energy use per million dollars of revenue) has decreased year-over-year since 2019. This metric describes the amount of energy used compared with the size of the company, meaning that while our overall electricity usage increased, eBay has been more efficient — something we strive to continue.</td>

C11. Carbon pricing

C11.1

(C11.1) Are any of your operations or activities regulated by a carbon pricing system (i.e. ETS, Cap & Trade or Carbon Tax)?

Yes

C11.1a

(C11.1a) Select the carbon pricing regulation(s) which impacts your operations.

EU ETS

C11.1b

(C11.1b) Complete the following table for each of the emissions trading schemes you are regulated by.

**EU ETS**

| % of Scope 1 emissions covered by the ETS | 0 |
| % of Scope 2 emissions covered by the ETS | 0 |
| Period start date | January 1 2021 |
| Period end date | December 31 2021 |
| Allowances allocated | 0 |
| Allowances purchased | 0 |
| Verified Scope 1 emissions in metric tons CO2e | 0 |
| Verified Scope 2 emissions in metric tons CO2e | 0 |
| Details of ownership | Other, please specify (Other, please specify: Aviation activities from non-commercial aircraft that we own and operate) |

**Comment**

In limited instances, eBay may be subject to the EU ETS. From 1 January 2012 all flights which arrive at or depart from an aerodrome situated in the territory of a Member State to which the Treaty applies shall be included. Flights which depart from or arrive in an aerodrome situated in the territory of a Member State to which the Treaty applies. This activity shall not include from 1 January 2013 to 31 December 2021, flights which, but for this point, would fall within this activity, performed by a non-commercial aircraft operator operating flights with total annual emissions lower than 1,000 tonnes per year and fewer than 243 flights per period for three consecutive four-month periods. In 2021, there were no eBay I Annex 1 flight segments due to COVID-19 and therefore no CO2e emissions were produced or recorded under the ETS trading scheme.
(C11.1d) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?

eBay anticipates that our total annual non-commercial aircraft emissions will be lower than 1,000 tonnes per year and fewer than 243 flights per period for three consecutive four-month periods in future years. Therefore, eBay will continue to receive a certification of exemption from the verification of an annual emissions report and the surrender of carbon offsets for all Annex 1 activities. In order to achieve the low emissions trajectory for aircraft and comply with the regulatory systems, eBay will continue to employ a senior management review system (including input from our aviation director and our Executive Leadership Team) to ensure that approved corporate jet travel is business critical. To also comply, eBay’s strategy includes purchasing Sustainable Aviation Fuels (SAF), which will also minimize our footprint.

C11.2

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?

No

C11.3

(C11.3) Does your organization use an internal price on carbon?

No, but we anticipate doing so in the next two years

C12. Engagement

C12.1

(C12.1) Do you engage with your value chain on climate-related issues?

Yes, our suppliers
Yes, other partners in the value chain

<td>0</td>
</tr>
</tbody>
</table>

Rationale for the coverage of your engagement

Reported percentages are based on the suppliers for the data center colocation providers where our servers reside. These suppliers have been prioritized because they are most relevant to managing our Scope 2 emissions at our data centers. We engage with these suppliers to support our company’s renewable energy target, in which we aim to source 100% of our electricity supply from renewable energy sources by 2025 for eBay-controlled data centers and offices. These suppliers are also critical in supporting our company’s overall Business Continuity Plans.

Impact of engagement, including measures of success

eBay has engaged with its colocation service providers by becoming a founding member of the Future of Internet Power working group, which has the goal of powering the internet with 100% renewable energy. In 2016 this group created, and eBay signed, the Corporate Co-Location and Cloud Buyers’ Principles. These principles outline six criteria that companies using Colo services would like to see their service providers meet. This included providing data on customer energy consumption, disclosing facility energy sources, and supporting renewable energy advocacy efforts. In 2021, our data center in Salt Lake City, Utah, again earned the ENERGY STAR® for Data Centers Label. Measures of success include the following: One of our largest providers, Switch, converted all of its locations in Nevada to renewable power, resulting in a nearly 50% reduction in our data center-related GHG emissions. While not a direct result of eBay’s Colo and Cloud Buyer’s Principles participation, we purposefully engaged with CEBA and Future of Internet Power buyer members to encourage COLO providers to offer renewable energy at their facilities. Due to our 100% renewable energy goal, having Switch convert to 100% renewables at eBay sites was critical to our path to 100% and a measure of our successful engagement. Another primary provider, Equinix, is responsible for covering many of our global COLOS, and also provides a significant amount of energy coverage. We continue to monitor the contribution of these footprints to our overall renewable strategy on an annual basis. Moving load from or to these facilities has a direct impact on our overall achievement of RE100 and necessitates determining if additional and new approaches will be needed. Switch’s participation in renewable procurement was factored into our overall success, where our threshold for these facilities is to contribute 20 to 25% of our total renewable energy footprint.

Comment

Please note that eBay has a relatively minimal supply chain because we do not hold inventory or sell manufactured products. eBay’s supply chain consists primarily of information technology, professional services and office supplies to support our digital platforms.
(C12.1d) Give details of your climate-related engagement strategy with other partners in the value chain.

EXPLANATION OF OTHER PARTNERS IN OUR VALUE CHAIN:

eBay continues to encourage adoption of low-carbon and electric transportation with our primary logistics partners, including USPS, UPS, and FedEx (which are not considered our direct suppliers in this context, but partners within our value chain). We also continue to provide guidance to protect sellers that could be impacted from hurricanes and wildfires, and clearly communicate eBay's expectations of sellers and their delivery of goods.

DESCRIPTION OF CLIMATE-RELATED ENGAGEMENT STRATEGY WITH OTHER PARTNERS IN OUR VALUE CHAIN:

Because much of online shopping is based on consumer convenience, we encourage our sellers to offer low-cost or free and fast shipping. By working with logistics partners, we can help to alleviate potential cost increases for shipping by emphasizing the importance of low-carbon transport options when traditional fuel prices continue to rise. This will in turn help us to retain and expand our customer base.

eBay has evaluated climate-related logistics and transportation parameters across our four geographies of operations: (1) North America, (2) Asia Pacific, (3) Latin America, and (4) Europe, Middle East and Africa, as well as in terms of their impacts on our marketplaces. We are currently exploring a pilot program for low carbon last mile delivery that will involve our value chain carrier partners.

(C12.2) Do your suppliers have to meet climate-related requirements as part of your organization's purchasing process?

Yes, climate-related requirements are included in our supplier contracts

(C12.2a) Provide details of the climate-related requirements that suppliers have to meet as part of your organization's purchasing process and the compliance mechanisms in place.

Retain and engage
Does your organization engage in activities that could either directly or indirectly influence policy, law, or regulation that may impact the climate?

Row 1

Direct or indirect engagement that could influence policy, law, or regulation that may impact the climate
- Yes, we engage directly with policy makers
- Yes, we engage indirectly through trade associations

Does your organization have a public commitment or position statement to conduct your engagement activities in line with the goals of the Paris Agreement?
- Yes

Attach commitment or position statement(s)
- www.ebaymainstreet.com/issues
- eBay Main Street.pdf

Describe the process(es) your organization has in place to ensure that your engagement activities are consistent with your overall climate change strategy
To ensure a coordinated approach to and positions on climate change and energy policy activities, regular meetings are held regularly between the Impact and Government Relations teams, along with other internal stakeholders from Global Communications, Finance, and Operations. Agendas for these meetings include business impacts, pending policy initiatives and discussion of how these do or do not align with our corporate climate and energy strategy, as well as identify any opportunities/requests to engage with external stakeholders on these activities. Per these discussions we have chosen to support We Mean Business, TCFD reporting and joined in the LEAD on Climate activities – consistent with our commitment to support climate action.

Primary reason for not engaging in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate
- Not Applicable

Explain why your organization does not engage in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate
- Not Applicable

(C12.3a) On what policy, law, or regulation that may impact the climate has your organization been engaging directly with policy makers in the reporting year?

Focus of policy, law, or regulation that may impact the climate
Other, please specify (Cap and Trade)

Specify the policy, law, or regulation on which your organization is engaging with policy makers
- eBay was a business voice in support of the landmark AB32 legislation and have continued to support state policy to strengthen and clarify AB 32 implementation. While AB32 was game changing, the emissions reduction mandates only extended through 2020. To continue momentum and address the need for larger GHG reductions globally, it was proposed the state create a more ambitious target and extend these targets to 2030.

Policy, law, or regulation geographic coverage
- National

Country/region the policy, law, or regulation applies to
- United States of America

Your organization’s position on the policy, law, or regulation
- Support with no exceptions

Description of engagement with policy makers
- eBay is a strong supporter of climate action nationally and in our headquarters state of California. eBay is a member of Business for Innovative Climate and Energy Policy (BICEP), which is an advocacy coalition run by Ceres comprised of businesses with the overall goal of supporting, “broad, bi-partisan consensus among policy makers to reduce US greenhouse gas emissions 80% below 1990 levels by 2050, with an interim goal of at least 25% below 1990 levels by 2020.” Via our role in BICEP, we regularly support state and federal legislation and global policy that reinforces BICEP’s position on climate change. More recently via BICEP, eBay reaffirmed corporate commitment to reducing carbon emissions by signing on to the “We Are Still In” initiative, which is a collection of over 1,200 policymakers, businesses, investors, and higher education institutions that support the Paris Climate Agreement. We were also a business voice in support of the landmark AB32 legislation and have continued to support state policy to strengthen and clarify AB 32 implementation. While AB32 was game changing, the emissions reduction mandates only extended through 2020. To continue momentum and address the need for larger GHG reductions globally, it was proposed the state create a more ambitious target and extend these targets to 2030. At the request of NGO stakeholders, eBay reached out to individual law makers to encourage their support of the bill.

Details of exceptions (if applicable) and your organization’s proposed alternative approach to the policy, law or regulation
- Not Applicable

Have you evaluated whether your organization’s engagement is aligned with the goals of the Paris Agreement?
- Yes, we have evaluated, and it is aligned

(C12.3b) Does your organization engage in activities that could either directly or indirectly influence policy, law, or regulation that may impact the climate?
(C12.3b) Provide details of the trade associations your organization engages with which are likely to take a position on any policy, law or regulation that may impact the climate.

**Trade association**
Other, please specify (TechNet)

**Is your organization’s position on climate change consistent with theirs?**
Consistent

**Has your organization influenced, or is your organization attempting to influence their position?**
We publicly promote their current position

**State the trade association’s position on climate change, explain where your organization’s position differs, and how you are attempting to influence their position (if applicable)**
TechNet advocates for a robust energy policy that encourages true competition in the energy market. TechNet also supports state policies to spur deployment of clean energy resources such as fuel cells, solar, wind, demand-side, advanced clean combustion, and clean transportation, and will work diligently to advance them. TechNet also supports smart grid technologies that increase the reliability and resilience of the electric grid; enable clean technologies and electric vehicles; and help consumers reduce their electric bills. TechNet also supports efforts to expand or create new programs should be inclusive, balanced, and data-driven in order to achieve stated aims and avoid significant disruption.

**Funding figure your organization provided to this trade association in the reporting year, if applicable (currency as selected in C0.4) (optional)**
<Not Applicable>

**Describe the aim of your organization’s funding**
<Not Applicable>

**Have you evaluated whether your organization’s engagement with this trade association is aligned with the goals of the Paris Agreement?**
Yes, we have evaluated, and it is aligned
